Convex Functions Monotone Operators And Differentiability Lecture Notes In Mathematics:

Convex Functions, Monotone Operators and Differentiability Robert R. Phelps, 2009-01-20 The improved and expanded second edition contains expositions of some major results which have been obtained in the years since the 1st edition. The affirmative answer by Preiss of the decades old question of whether a Banach space with an equivalent Gateaux differentiable norm is a weak Asplund space. The startlingly simple proof by Simons of Rockafellar's fundamental maximal monotonicity theorem for subdifferentials of convex functions. The exciting new version of the useful Borwein-Preiss smooth variational principle due to Godefroy, Deville, and Zizler. The material is accessible to students who have had a course in Functional Analysis; indeed the first edition has been used in numerous graduate seminars. Starting with convex functions on the line, it leads to interconnected topics in convexity, differentiability, and subdifferentiability of convex functions in Banach spaces, generic continuity of monotone operators, geometry of Banach spaces, and the Radon-Nikodym property. Convex analysis, variational principles, and perturbed optimization. While much of this is classical, streamlined proofs found more recently are given in many instances. There are numerous exercises, many of which form an integral part of the exposition.

Lipschitz Functions Ştefan Cobzaş, Radu Miculescu, Adriana Nicolae, 2019-05-23 The aim of this book is to present various facets of the theory and applications of Lipschitz functions, starting with classical and culminating with some recent results. Among the included topics we mention characterizations of Lipschitz functions and relations with other classes of functions, extension results for Lipschitz functions and Lipschitz partitions of unity, Lipschitz free Banach spaces and their applications, compactness properties of Lipschitz operators, Bishop-Phelps type results for Lipschitz functionals, applications to best approximation in metric and in metric linear spaces, Kantorovich-Rubinstein norm and applications to duality in the optimal transport problem, Lipschitz mappings on geodesic spaces. The prerequisites are basic results in real analysis, functional analysis, measure theory including vector measures, and topology, which for reader's convenience are surveyed in the first chapter of the book.

Zaslavski, 2015-03-30 This volume contains the proceedings of the workshop on Infinite Products of Operators and Their Applications held from May 21-24, 2012 at the Technion Israel Institute of Technology, Haifa, Israel. The papers cover many different topics regarding infinite products of operators and their applications, projection methods for solving feasibility and best approximation problems, arbitrarily slow convergence of sequences of linear operators, monotone operators, proximal point algorithms for finding zeros of maximal monotone operators in the presence of computational errors, the Pascoletti-Serafini problem, remetrization for infinite families of mappings, Poisson's equation for mean ergodic operators, vector valued metrics in fixed point theory, contractivity of infinite products and mean convergence theorems for generalized nonspreading mappings. This book is co-published with Bar Ilan University, Ramat Gan, Israel.
