Donnersberger, Anne Lesak Scott, Anne E. Lesak, 2000 **Information Technology in Health Science Education** E. de Land, 2013-11-11 This first volume is but an introduction to the growing use of computer based systems in health science education It is unlikely that the intellectual or applied system constructs herein are either exhaustive of the field or immutable growth is inevitable For one thing the field is still fractured and loosely organized which is an inevitable description of an adolescent science in a rich mine of ideas There is emerging however an organizing concept A short look into the future indicates that educational system design will be dominated by a concept which for want of a better term we may call an information system Actually this term derives from an early New York World s Fair exhibition designed by Charles Eames entitled the Informational Machine in which the designer illustrated once again his insight into the future by showing how in a fundamental manner the digital computer promised to affect and to change our lives and this change is by no means completed Even during the publication of this volume the basic sciences requisite to the development of an information machine have evolved significantly The three intellectual areas to watch are developments in artificial intelligence graphics and man machine interaction and basic component and computer system design *National Library of Medicine Current Catalog* National Library of Medicine (U.S.), **Sectional Anatomy of the Head and Neck** John H. Lillie, Brent A. Bauer, 1994 This superb atlas of the sectional anatomy of the head and neck exclusive of the CNS is presented in two complementary planes coronal and horizontal Sixty four exceptional pen and ink illustrations accurately capture the fine detail of 3mm thick sections through the region Every detail was exactly transferred from photographs of the section and its identification was confirmed by microdissection of the exposed surface These pen and ink images have been reproduced at natural size in labeled and unlabeled pairs an approach

that allows the complete identification of structures without masking critical anatomical detail The captions that accompany each set of illustrations provide brief authoritative information about the section and how it relates to adjacent tissues Difficult concepts such as regional compartments and facial spaces are clearly explained reflecting the broad experience of the senior author in teaching the basic as well as the applied clinical anatomy of the head and neck Twenty two sections have been selected for radiographic imaging These high resolution radiographs portray planar detail at a level which closely simulates that revealed by high quality CT images of the region Introductory chapters review the history of sectional anatomy and provide a unique overview of the fundamental organization of the head and neck They enhance the value of an atlas that will guide the student and clinician through a sequential study of this anatomically intricate region and will aid radiologists in interpreting bony images and relating them to the soft tissues which surround them **The Cumulative Book Index**
