Equalizer Programming and User Guide Stefan Eilemann, 2012-07-20 The official reference for developing and deploying parallel scalable OpenGL applications based on the Equalizer parallel rendering framework. [Visualization and Mathematics](#) Hans-Christian Hege, Konrad Polthier, 1997 Visualization and mathematics have begun a fruitful relationship establishing links between problems and solutions of both fields. In some areas of mathematics like differential geometry and numerical mathematics visualization techniques are applied with great success. However, visualization methods are relying heavily on mathematical concepts. Applications of visualization in mathematical research and the use of mathematical methods in visualization have been topic of an international workshop in Berlin in June 1995. Selected contributions treat topics of particular interest in current research. Experts are reporting on their latest work giving an overview on this fascinating new area. The reader will get insight to state of the art techniques for solving visualization problems and mathematical questions.

Computer Graphics Through OpenGL Sumanta Guha, 2014-08-06 From geometric primitives to animation to 3D modeling to lighting, shading and texturing, Computer Graphics Through OpenGL: From Theory to Experiments, Second Edition presents a comprehensive introduction to computer graphics that uses an active learning style to teach key concepts. Equally emphasizing theory and practice, the book provides an understanding not only of the principles of 3D computer graphics but also the use of the OpenGL Application Programming Interface API to code 3D scenes and animation including games and movies. The undergraduate core of the book is a one semester sequence taking the student from zero knowledge of computer graphics to a mastery of the fundamental concepts with the ability to code applications using fourth generation OpenGL. The remaining chapters explore more advanced topics including the structure of curves and surfaces and the application of projective spaces and transformations. New to the Second Edition: 30 more programs, 50 more experiments, and 50 more exercises. Two new chapters on OpenGL 4.3 shaders and the programmable pipeline. Coverage of Vertex buffer and array objects, Occlusion culling and queries, and conditional rendering. Texture matrices, Multitexturing, and texture combining. Multisampling. Point sprites. Image and pixel manipulation. Pixel buffer objects. Shadow mapping. Web
