Remote Sensing Digital Image Analysis John A. Richards, 2022-01-06 *Remote Sensing Digital Image Analysis* provides a comprehensive treatment of the methods used for the processing and interpretation of

remotely sensed image data Over the past decade there have been continuing and significant developments in the algorithms used for the analysis of remote sensing imagery even though many of the fundamentals have substantially remained the same As with its predecessors this new edition again presents material that has retained value but also includes newer techniques covered from the perspective of operational remote sensing The book is designed as a teaching text for the senior undergraduate and postgraduate student and as a fundamental treatment for those engaged in research using digital image analysis in remote sensing The presentation level is for the mathematical non specialist Since the very great number of operational users of remote sensing come from the earth sciences communities the text is pitched at a level commensurate with their background The chapters progress logically through means for the acquisition of remote sensing images techniques by which they can be corrected and methods for their interpretation The prime focus is on applications of the methods so that worked examples are included and a set of problems conclude each chapter **Real-Time Rendering,**

it has traditionally been seen as a means of documenting an external reality or expressing an internal feeling photography is now capable of actualizing never existed pasts and never lived experiences Thanks to the latest photographic technologies we can now take photos in computer games interpolate them in extended reality platforms or synthesize them via artificial intelligence To account for the most recent shifts in conceptualizations of photography this book proposes the term virtual photography as a binding theoretical framework defined as a photography that retains the efficiency and function of real photography made with or without a camera while manifesting these in an unfamiliar or noncustomary form **Course**
