Concurrent Engineering Andrew Kusiak, 1993-01-12 Presents a top down approach to the design development testing and recyclability of products components and systems across a wide range of industries Starting with the desired result and working back through the details it shows how to produce goods taking into account the challenges of actual manufacture what the reliability requirements should be quality control associated costs customer needs and more Additional features include case studies and team negotiating Also well illustrated with figures photographs charts and tables and includes an extensive bibliography

Concurrent Engineering Peihua Gu, Andrew Kusiak, 1993 Hardbound Increasing global competition in a product oriented industry has required manufacturing enterprises to continuously improve product quality functionality and features as well as implementing a reduction in product cost and time to market The traditional approach to product development requires a substantial amount of time to evolve the product design from its initial configuration to the final product Since 70% or more of the total product cost is determined in the design stages significant potential savings can be achieved by improving traditional design practices Because of its effectiveness and great potential in product design concurrent engineering CE is attracting great interest from both industry and academia The thirteen research papers in this volume provide a current overview on progress in concurrent engineering Divided into two parts Part I primarily focuses on methodology and applications of CE while Part II discusses

Concurrent Engineering C.S. Syan, U. Menon, 2012-12-06 BACKGROUND There is an increasing awareness that time to market is the key competitive issue in the manufacturing industry today The global markets are demanding products that are well designed are of high quality and are at low prices with ever decreasing lead times Hence manufacturers are forced to utilize the best methods of technology with efficient control and management accompanied by suitably enabling organizational structures Concurrent engineering CE is widely seen to be the methodology that can help satisfy these strenuous demands and keep the profitability and viability of product developers manufacturers and suppliers high There have been many reported successes of CE in practice Rover were able to launch Land Rover Discovery in 18 months as compared with 48 63 months for similar products in Europe Because of its early introduction to the market it became the

best selling product in its class AT T report part counts down to one ninth of their previous levels and quality one hundred times in surface defects for VLSI very improvements of large scale integration circuits as a result of using the CE approach

WHO SHOULD READ THIS TEXT This book will aim to provide a sound basis for the very diverse subject known as concurrent engineering Concurrent engineering is recognized by an increasingly large proportion of the manufacturing industry as a necessity in order to compete in today s markets This recognition has created the demand for information awareness and training in good concurrent engineering practice Implementing Concurrent Engineering in Small Companies Susan Skalak,2002-07-17 Presenting a systematic approach to concurrent engineering CE this reference accommodates the small corporation s quest to incorporate better design management practices The author provides an easy to follow methodology that eliminates the need for costly consultants and promotes environmentally friendly solutions and introduces three main design models to aid in new evolutionary and incremental product design She examines how the adoption of CE practices improves overall performance Topics include engineering specifications for product parameters conceptual and embodiment design vendor selection and approval prototyping line and equipment installation and more

Concurrent Engineering Design Landon C. G. Miller,1993 Increasing intensity surrounding globalization of manufacturing and its competitive environment force a much higher expectation of design as falling within the optimum range of parameters This new book explains how the CE Design process provides a stable repeatable process through which increased accuracy is achieved Section I The Business Environment Surrounding Concurrent Engineering Design includes an introduction asks Why CE Design explains how CE Design can create a competitive advantage and addresses CE Design as a world class manufacturing enabler Section II Concurrent Engineering Design Business Process Framework looks at CE DesignAs relationship to process management the design process and manufacturability process Section III Concurrent Engineering Design Architectural and Implementation Framework focuses on CE DesignAs automated infrastructure and implementation planning for engineering design **Concurrent Engineering and Design for Manufacture of**

Electronics Products Sammy G. Shina,2012-12-06 This book is intended to introduce and familiarize design production quality and process engineers and their managers to the importance and recent developments in concurrent engineering CE and design for manufacturing DFM of new products CE and DFM are becoming an important element of global competitiveness in terms of achieving high quality and low cost products The new product design and development life cycle has become the focus of many manufacturing companies as a road map to shortening new product introduction cycles and to achieving a quick ramp up of production volumes Customer expectations have increased in demanding high quality functional and user friendly products There is little time to waste in solving manufacturing problems or in redesigning products for ease of manufacture since product life cycles have become very short because of technological breakthroughs or competitive pressures Another important reason for the increased attention to DFM is that global products have developed into very

opposing roles either they are commodities with very similar features capabilities and specifications or they are very focused on a market niche In the first case the manufacturers are competing on cost and quality and in the second they are in race for time to market DFM could be a very important competitive weapon in either case for lowering cost and increasing quality and for increasing production ramp up to mature volumes
