Scientific and Technical Aerospace Reports, 1967 Control System Design Guide Mary Ann Piette, Hannah Friedman, Norman Bourassa, Tudi Haas, David Sellers, 2003. The Control System Design Guide Design Guide provides methods and recommendations for the control system design process and control point selection and installation. Control systems are often the most problematic system in a building. A good design process that takes into account maintenance operation and commissioning can lead to a smoothly operating and efficient building. To this end the Design Guide provides a toolbox of templates for improving control system design and specification. HVAC designers are the primary audience for the Design Guide. The control design process it presents will help produce well designed control systems that achieve efficient and robust operation. The spreadsheet examples for control valve schedules, damper schedules, and points lists can streamline the use of the control system design concepts set forth in the Design Guide by providing convenient starting points from which designers can build. Although each reader brings their own unique questions to the text, the Design Guide contains information that designers, commissioning providers, operators, and owners will find useful.

Design Guide to Industrial Control Systems Jeremy Bryce Dixon, 2014 Industrial control systems are being implemented throughout the workplace performing simple functions such as maintaining the temperature of a grill at a fast food restaurant to complex functions such as automating large printing presses They can be as simple as a single controller with one input and one output to a network of hundreds of controllers spread across a city with thousands of digital and analog inputs and outputs In the field of printing the demand for high quality prints is rapidly increasing driving a demand for coated substrates that require highly automated offline coaters to produce This presents an opportunity to develop an advanced industrial control system that requires a multidisciplinary team to succeed For this report the design methodology of an industrial control system as it applies to an automated offline coater will be presented Relevant national and international standards will be discussed and referenced with respect to how they apply to the design process The engineering behind component selection for various control points such as motor speed and position control power supplies power control and regulation circuit protection sensors and safety systems will be presented These systems will be brought together to produce a fully automated offline coater
