*Control of Complex Nonlinear Systems with Delay* Philipp Hövel, 2010-09-27 This research addresses delay effects in nonlinear systems which are ubiquitous in various fields of physics chemistry biology engineering and even in social and economic systems They may arise as a result of processing times or due to the finite propagation speed of information between the constituents of a complex system Time delay has two complementary counterintuitive and almost contradictory facets On the one hand delay is able to induce instabilities bifurcations of periodic and more complicated orbits multi stability and chaotic motion On the other hand it can suppress instabilities stabilize unstable stationary or periodic states and may control complex chaotic dynamics This thesis deals with both aspects and presents novel fundamental results on the controllability of nonlinear dynamics by time delayed feedback as well as applications to lasers hybrid mechanical systems and coupled neural systems

### **Frequency-domain Approach To Hopf Bifurcation Analysis: Continuous**

**Time-delayed Systems** Franco Sebastian Gentile, Jorge Luis Moiola, Guanrong Chen, 2019-10-07 This book is devoted to the study of an effective frequency domain approach based on systems control theory to compute and analyze several types of standard bifurcation conditions for general continuous time nonlinear dynamical systems A very rich pictorial gallery of local bifurcation diagrams for such nonlinear systems under simultaneous variations of several system parameters is presented Some higher order harmonic balance approximation formulas are derived for analyzing the oscillatory dynamics in small neighborhoods of certain types of Hopf and degenerate Hopf bifurcations The frequency domain approach is then extended to the large class of delay differential equations where the time delays can be either discrete or distributed For the case of discrete delays two alternatives are presented depending on the structure of the underlying dynamical system where the more general setting is then extended to the case of distributed time delayed systems Some representative examples in engineering and biology are discussed
