Modeling, Analysis and Enhancement of the performance of a Wind Driven DFIG During steady state and transient conditions Mohmoud Mossa,2014-02-01 Recently wind electrical power systems are getting a lot of attention since they are cost competitive environmentally clean and safe renewable power source as compared with the fossil fuel and nuclear power generation A special type of induction generator called a doubly fed induction generator DFIG is used extensively for high power wind applications They are used more and more in wind turbine applications due to the ease of controllability the high energy efficiency and the improved power quality This research aims to develop a method of a field orientation scheme for control both the active and the reactive powers of a DFIG that are driven by a wind turbine Also the dynamic model of the DFIG driven by a wind turbine during grid faults is analyzed and developed using the method of symmetrical components Finally this study proposes a novel fault ride through FRT capability with a suitable control strategy i e the ability of the

power system to remain connected to the grid during faults **Control of a Wind Driven Doubly Fed Induction Generator During Grid Faults** Mahmoud Mossa,2013-02-06 Master s Thesis from the year 2013 in the subject Engineering Power Engineering grade none course Electrical engineering Renewable energy language English abstract Wind electrical power systems are recently getting lot of attention because they are cost competitive environmental clean and safe renewable power source as compared with fossil fuel and nuclear power generation A special type of induction generator called a doubly fed induction generator DFIG is used extensively for high power wind applications They are used more and more in wind turbine applications due to ease controllability high energy efficiency and improved power quality This thesis aims to develop a method of a field orientation scheme for control both the active and reactive powers of a DFIG driven by a wind turbine The proposed control system consists of a wind turbine that drives a DFIG connected to the utility grid through AC DC AC link The main control objective is to regulate the dc link voltage for operation at maximum available wind power This is achieved by controlling the and axes components of voltages and currents for both rotor side and line side converters using PI controllers The complete dynamic model of the proposed system is described in detail Computer simulations have been carried out in order to validate the effectiveness of the proposed system during the variation of wind speed The results prove that better overall performances are achieved quick recover from wind speed disturbances in addition to good tracking ability Generally any abnormalities associated with grid asymmetrical faults are going to affect the system performance considerably During grid faults unbalanced currents cause negative effects like overheating problems and mechanical stress due to high torque pulsations that can damage the rotor shaft gearbox or blade assembly Therefore the dynamic model of the DFIG driven by a wind turbine during grid faults has been analyzed and developed using the method of symmetrical components The dynamic performance of the DFIG during unbalanced grid conditions is analyzed and described in detail using digital simulations A novel fault ride through FRT capability is proposed i e the ability of the power system to remain connected to the grid during faults with suitable control strategy in this thesis In this scheme the input mechanical energy of the wind turbine during grid faults is stored and utilized at the moment of fault clearance instead of being dissipated in the resistors of the crowbar circuit as in the existing FRT schemes **Parallel Manipulators of Robots** Korganbay Sagnayevich Sholanov,2020-09-10 This book describes the theoretical framework of parallel manipulators and presents examples of their application The theoretical part begins with the theory of parallel manipulator synthesis Working on this basis various topology designs of one loop and multiloop parallel manipulators are then obtained The next section describes the zero parameters method for the analysis of mechanism manipulator structure with closed kinematic circuits and includes examples of its application highlighting its advantages compared to traditional methods The book then presents the redundant parameters method for determining the position of special parallel manipulator links and discusses its application in solving the direct problem of link position for multiloop manipulators It also addresses one loop and multiloop

manipulators and includes a solution for the direct and inverse link position problems of kinematics In closing the book presents a range of potential applications for parallel manipulator These examples are intended to promote the development and implementation of new engineering solutions e g in seismic protection systems renewable energy and other areas The book includes a wealth of material that can be used for teaching undergraduate graduate and PhD students majoring in robotics automation and related fields and can also be used by researchers to solve problems in connection with introducing robotics technologies   New Directions in Women, Peace and Security Soumita Basu,Paul C.
