## **Cubic Metaplectic Forms And Theta Functions Lecture Notes In Mathematics:**

**Cubic Metaplectic Forms and Theta Functions** Nikolai Proskurin,1998-01-19 The book is an introduction to the theory of cubic metaplectic forms on the 3 dimensional hyperbolic space and the author's research on cubic metaplectic forms on special linear and symplectic groups of rank 2. The topics include Kubota and Bass Milnor Serre homomorphisms, cubic metaplectic Eisenstein series, cubic theta functions, Whittaker functions. A special method is developed and applied to find Fourier coefficients of the Eisenstein series and cubic theta functions. The book is intended for readers with beginning graduate level background interested in further research in the theory of metaplectic forms and in possible applications.

Automorphic Forms, Automorphic Representations, and Arithmetic Robert S. Doran,1999    Number Theory, Trace Formulas and Discrete Groups Karl Egil Aubert,Enrico Bombieri,Dorian Goldfeld,2014-05-10 Number Theory Trace Formulas and Discrete Groups Symposium in Honor of Atle Selberg Oslo Norway July 14-21 1987 is a collection of papers presented at the 1987 Selberg Symposium held at the University of Oslo. This symposium contains 30 lectures that cover the significant contribution of Atle Selberg in the field of mathematics. This book is organized into three parts encompassing 29 chapters. The first part presents a brief introduction to the history and developments of the zeta function. The second part contains lectures on Selberg's considerable research studies on understanding the principles of several aspects of mathematics including in modular forms, the Riemann zeta function, analytic number theory, sieve methods, discrete groups, and trace formula. The third part is devoted to Selberg's further research works on these topics with particular emphasis on their practical applications. Some of these research studies including the integral representations of Einstein series and L functions, first eigenvalue for congruence groups, the zeta function of a Kleinian group, and the Waring's problem are discussed. This book will prove useful to mathematicians, researchers, and students.

**Contributions in Analytic and Algebraic Number Theory** Valentin Blomer, Preda Mihăilescu, 2011-11-19 The text that comprises this volume is a collection of surveys and original works from experts in the fields of algebraic number theory, analytic number theory, harmonic analysis, and hyperbolic geometry. A portion of the collected contributions have been developed from lectures given at the International Conference on the Occasion of the 60th Birthday of S J Patterson held at the University of Göttingen July 27-29 2009. Many of the included chapters have been contributed by invited participants. This volume presents and investigates the most recent developments in various key topics in analytic number theory and several related areas of mathematics. The volume is intended for graduate students and researchers of number theory as well as applied mathematicians interested in this broad field.

**Combinatorial Stochastic Processes** Jim Pitman, 2006-05-11 The purpose of this text is to bring graduate students specializing in probability theory to current research topics at the interface of combinatorics and stochastic processes. There is a particular focus on the theory of random combinatorial structures such as partitions, permutations, trees, forests, and mappings, and connections between the asymptotic theory of enumeration of such structures and the theory of stochastic
