Pharmacotherapy of Depression Domenic A. Ciraulo, Richard Irwin Shader, 2004-04-28 For many years we have taught clinical psychopharmacology to residents in psychiatry neurology and medicine as well as to medical students nurses psychologists counselors and social workers We have also maintained active clinical practices and research programs It is our hope that these experiences have produced a book that will serve as a resource in antidepressant therapy for clinicians from many different disciplines The purpose of *Pharmacotherapy of Depression* is to provide a comprehensive overview of antidepressant therapy for clinicians The contents have evolved from our years of seminars lectures and case discussions with our trainees and from our continuing medical education programs We have tried to provide sufficient depth in reviews of the research literature to support clinical recommendations without burdening the reader with information that has little relevance to the clinical use of antidepressants We are indebted to the outstanding clinician scientists who have contributed to this volume and to our students who have guided us in its development We hope that the reader will find that the final product represents a solid foundation for clinicians who are or will be prescribing antidepressants It comes very close to replicating the formal didactics that our trainees experience Although in practice we supplement this with intensive supervision of patient management we hope that *Pharmacotherapy of Depression* will stand alone as a guide to the use of medications for the treatment of depressive illness

Handbook of Stroke Prevention in Clinical Practice Karen L. Furie, Peter J. Kelly, 2004-04-28 Despite major advances in the understanding of stroke mechanisms that have occurred over the past quarter century stroke continues to rank among the leading causes of death and disability worldwide Although currently it may be difficult to believe early doubts were expressed as to whether interventions in risk factors for either coronary disease or stroke would actually lead to a reduction in the incidence of these disorders However large clinical trials in hypertension carotid disease atrial fibrillation and antithrombotic and antiplatelet therapies have effectively demonstrated the efficacy of these targeted interventions in reducing stroke incidence More recently after earlier uncertainty regarding the role of elevated lipids as a risk factor for stroke clinical trials of the statins have also demonstrated a significant reduction in the incidence of ischemic stroke However as emphasized in *Handbook of Stroke Prevention in Clinical Practice* despite these gains and the initial decline in stroke incidence that did occur in the 1960s and 1970s the incidence of stroke disappointingly has failed to show a further significant decline since that time The editors of *Handbook of Stroke Prevention in Clinical Practice* raise the very important question of whether recognized strategies for stroke prevention have been widely or effectively implemented They correctly emphasize the critical importance of identifying the mechanism of stroke in each patient so as to properly direct prevention and treatment As Dr

Beverly A. Teicher,Paul A. Andrews,2004-02-01 This unique volume traces the critically important pathway by which a molecule becomes an anticancer agent The recognition following World War I that the administration of toxic chemicals such as nitrogen mustards in a controlled manner could shrink malignant tumor masses for relatively substantial periods of time gave great impetus to the search for molecules that would be lethal to specific cancer cells Weare still actively engaged in that search today The question is how to discover these anticancer molecules **Anticancer Drug Development Guide** Preclinical Screening Clinical Trials and Approval Second Edition describes the evolution to the present of preclinical screening methods The National Cancer Institute s high throughput in vitro disease specific screen with 60 or more human tumor cell lines is used to search for molecules with novel mechanisms of action or activity against specific phenotypes The Human Tumor Colony Forming Assay HTCA uses fresh tumor biopsies as sources of cells that more nearly resemble the human disease There is no doubt that the greatest successes of traditional chemotherapy have been in the leukemias and lymphomas Since the earliest widely used in vivo drug screening models were the murine L 1210 and P388 leukemias the community came to assume that these murine tumor models were appropriate to the discovery of antileukemia agents but

that other tumor models would be needed to discover drugs active against solid tumors **EBOOK: Using Information Technology Complete Edition** Brian Williams,2012-03-16 EBOOK Using Information Technology Complete Edition
