*The Development and Scaling of the EasyCBM CCSS Elementary Mathematics Measures* Jessica L. Saven, P. Shawn Irvin, Bitnara Jasmine Park, Julie Alonzo, Daniel Anderson, Gerald Tindal, 2012

The results of formative assessments are regularly used to inform important instructional decisions e.g. targeted intervention within a response to intervention RTI system of teaching and learning. The validity of such instructional decision making depends in part on the alignment between formative measures and the academic content standards on which classroom instruction is based as well as the technical adequacy of the measures used in RTI applications. In the following technical report we describe the development and scaling of the easyCBM Common Core State Standards elementary school mathematics measures for use within an RTI framework. Within a given grade math items from two distinct item pools were calibrated to a common horizontal scale using a 1 parameter Rasch analysis. The results of the scaling were then used to construct 13 alternate forms designed to be of comparable difficulty. 3 forms designated for seasonal benchmark screening and 10 designated for progress monitoring. Prior and subsequent grade level math items were added to the benchmark test forms as a basis for constructing a common vertical scale in the future. Evidence of technical adequacy is reported in appendices by both test form and by the full bank of CCSS items piloted and scaled. The following are appended:

- 1 Training Materials
- 2 Item Statistics by Test Form
- 3 Distractor Statistics by Test Form
- 4 Item Statistics for Full CCSS Item Bank
- 5 Distractor Statistics for Full CCSS Item Bank
