    Common Lisp Guy L. Steele,1989-12-01   **Intelligent Systems** L.S. Sterling,2012-12-06 Published in honour of the 70th birthday of Yoh Han Pao George S Dively Dis tinguished Professor of Engineering at Case Western Reserve University Cleveland Ohio this festschrift embraces a remarkably diverse set of topics Drawing from the fields of pattern recognition engineering artificial intelligence and artificial neural systems it is a fitting testament to the extraordinary breadth of his professional in terests both in foundational research into the new technology of Intelligent Systems and ill the application of that evolving technology to the solution of hard engineering problems In common with many scientists who build their reputations in one field before devoting their considerable energies and talents to another one by 1972 the year in which I met him for the first time Yoh Han had made significant contributions to laser technology in particular to the development of the highly accurate and stable lasers required for holographic recording purposes In conventional holography the information stored in a hologram produces a virtual image of the object charac terised by it However Yoh Han became fascinated by the possiblity of driving the process hackwards of using the hologram as an associative memory device enabling previously stored information to be retrieved on the basis of partial cues It was this burgeoning interest which shaped his career for more than twenty years Just prior to 1972 my colleagues Professor Christopher Longuet Higgins and Dr   **The APDAlog** ,1991   *Parallel Symbolic Computing: Languages, Systems, and Applications* Robert H. Halstead,Takayasu Ito,1993-11-03 Parallel and distributed computing are becoming increasingly important as cost effective ways to achieve high computational performance Symbolic computations are notable for their use of irregular data structures and hence parallel symbolic computing has its own distinctive set of technical challenges The papers in this book are based on presentations made at a workshop at MIT in October 1992 They present results in a wide range of areas including speculative computation scheduling techniques program development tools and environments programming languages and systems models of concurrency and distribution parallel computer architecture and symbolic applications   *Computer Algebra With*

Symbolicc++ Yorick Hardy,Willi-hans Steeb,Kiat Shi Tan,2008-09-04 This book gives a comprehensive introduction to computer algebra together with advanced topics in this field It provides a detailed coverage of the mathematics of computer algebra as well as a step by step guide to implement a computer algebra system in the object oriented language C The used tools from C are introduced in detail Numerous examples from mathematics physics and engineering are presented to illustrate the system s capabilities Computer algebra implementations in LISP and Haskell are also included In addition gene expression programming and multiexpression programming with applications to computer algebra are introduced **The Art of the Metaobject Protocol** Gregor Kiczales,Jim Des Rivieres,Daniel G. Bobrow,1991-07-30 The authors introduce this new approach to programming language design describe its evolution and design principles and present a formal specification of a metaobject protocol for CLOS The CLOS metaobject protocol is an elegant high performance extension to the CommonLisp Object System The authors who developed the metaobject protocol and who were among the group that developed CLOS introduce this new approach to programming language design describe its evolution and design principles and present a formal specification of a metaobject protocol for CLOS Kiczales des Rivi res and Bobrow show that the art of metaobject protocol design lies in creating a synthetic combination of object oriented and reflective techniques that can be applied under existing software engineering considerations to yield a new approach to programming language design that meets a broad set of design criteria One of the major benefits of including the metaobject protocol in programming languages is that it allows users to adjust the language to better suit their needs Metaobject protocols also disprove the adage that adding more flexibility to a programming language reduces its performance In presenting the principles of metaobject protocols the authors work with actual code for a simplified implementation of CLOS and its metaobject protocol providing an opportunity for the reader to gain hands on experience with the design process They also include a number of exercises that address important concerns and open issues Gregor Kiczales and Jim des Rivi res are Members of the Research Staff and Daniel Bobrow is a Research Fellow in the System Sciences Laboratory at Xerox Palo Alto Research Center **The Second ACM SIGPLAN History of Programming Languages Conference (HOPL-II), April 20-23, 1993, Cambridge, Massachusetts, USA** ,1993 **History of Programming Languages II** Thomas J.
