## Chapter 1

### Exercise 1.1

#### Focus

- 1 A solid has a fixed *mass* and *volume* / *shape*.  
A liquid has a fixed *mass* but its *shape* changes to match that of the container in which it is placed. A gas has no fixed *shape* or *volume*.  
A gas completely fills the container it is in.

#### Practice

- 3
  - a B
  - b C
  - c A
  - d D
- 4 A – freezing (solidification); B – melting;  
C – condensation; D – evaporation or boiling

#### Challenge

- 5
  - a radon
  - b radon and nitrogen
  - c nitrogen
  - d cobalt
  - e The sample of ethanoic acid is impure. The presence of impurities raises the boiling point of a substance.

### Exercise 1.2

#### Focus

- 2 The student would need to use an oil bath (instead of the water bath) so she could heat the substance to a higher temperature.
- 3 The substance is freezing (solidifying) / turning from liquid to solid.

#### Practice

- 4 The temperature stays constant because energy is released as the substance solidifies / the molecules are giving out heat as they stop moving from place to place and become organised in a structured lattice arrangement / in a solid the molecules can only vibrate about fixed points / the heat released by the formation of new interactions (forces) between the particles keeps the temperature constant until all the substance is solid.
