Chemical Education: Towards Research-based Practice J.K. Gilbert, Onno de Jong, Rosária Justi, David F. Treagust, Jan H. van Driel, 2006-03-11 Chemical education is essential to everybody because it deals with ideas that play major roles in personal, social and economic decisions. This book is based on three principles: that all aspects of chemical education should be associated with research; that the development of opportunities for chemical education should be both a continuous process and be linked to research; and that the professional development of all those associated with chemical education should make extensive and diverse use of that research. It is intended for pre-service and practising chemistry teachers and lecturers, chemistry teacher educators, chemical education researchers, the designers and managers of formal chemical curricula, informal chemical educators, authors of textbooks and curriculum support materials, practising chemists and chemical technologists. It addresses the relation between chemistry and chemical education, curricula for chemical education, teaching and learning about chemical compounds and chemical change, the development of teachers, the development of chemical education as a field of enquiry. This is mainly done in respect of the full range of formal education contexts: schools, universities, vocational colleges, but also in respect of informal education contexts: science centres and museums

Student's Solutions Manual Bradley M. Wile, Karen S. Brewer, 2014 The Student's Solutions Manual contains solutions to all odd-numbered problems. To help students visualize approaches to problem solving, the solutions manual contains original artwork. Much of this artwork has been integrated into the hints and feedback within SmartWork
