

### Assembling Universal Joint

When assembling the universal it is important to put the two halves back in the same position they were originally.

The outer surface of each ring has a straight mark on it and the marks on each half should be exactly opposite each other when assembly is made. This is important.

**CAUTION:** After universal joint yoke has been driven on the transmission main drive shaft and is securely fastened in place, try turning the transmission main shaft and yoke to make sure the rear main bearing has not been forced out of place and to see that the shaft turns freely and is not jammed forward tightly against the thrust washer at forward end of the transmission main drive shaft.

### To Remove Rear Wheel

First remove hub cap.

Second, remove castle nut and washer from end of axle shaft, then by use of wheel puller such as shown in Fig. 70, draw the wheel from the tapered axle shaft.

### To Replace Rear Wheel

In replacing the rear wheel reverse the operation given above, being careful that the rear wheel key is in place properly and is a close fit in the key-way of both the axle shaft and wheel hub.

### To Remove Rear Axle Shaft

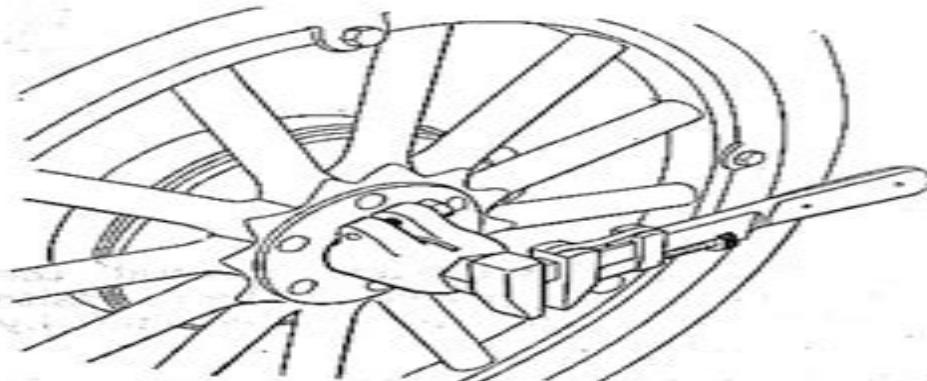

Fig. 70—Wheel Puller

First, remove rear wheel using puller such as is shown in Fig. 70.

Second, remove the cap screws holding bearing retainer cap in place and pull out axle shaft and bearing. If axle shaft and bearing do not slip out easily it may be necessary to use a puller such as is shown in Fig. 71.
