Asundi,2002-12-10 The term photomechanics describes a suite of experimental techniques which use optics photo for studying problems in mechanics The field has been in existence for some time but has always lagged behind other experimental and numerical techniques The main reason for this is that the interpretation of data which whilst providing whole field visualization is not in a form readily amenable to the end user Digital image processing has become common within the photomechanics community However one approach does not fit all and subtle variations in technique and method have been developed by different groups working on specific applications This primer enables the user to get started with their experimental analysis quickly It is based on the universally popular MATLAB software which includes dedicated and optimized functions for a variety of image processing tasks These can readily scripted along with the necessary mathematical expressions for particular experimental techniques The book provides an introduction to some of the optical techniques and then introduces MATLAB routines specific to the image processing in experimental mechanics There are also case studies on particular techniques As part of the book a collection of M files is provided on CD ROM which also contains example images and test code This provides a starting point for the user who can then easily add or edit statements or function for their own images MATLAB is a registered trademark of The MathWorks Inc For product information visit <http://www.mathworks.com>    [Painting the Web](#) Shelley Powers,2008-05-01 Do you think that only professionals with expensive tools and years of experience can work with web graphics This guide tosses that notion into the trash bin Painting the Web is the first comprehensive book on web graphics to come along in years and author Shelley Powers demonstrates how readers of any level can take advantage of the graphics and animation capabilities built into today s powerful browsers She covers GIFs JPEGs and PNGs raster and vector graphics CSS Ajax effects the canvas objects SVG geographical applications and more everything that designers and non designers use to literally paint the Web More importantly Shelley s own love of web graphics shines through in every example Not only can you master the many different techniques you also can have fun doing it Topics in Painting the Web include GIF JPEG PNG lossy versus lossless compression color management and optimization Photo workflow from camera to web page including a review of photo editors workflow tools and RAW photo utilities Tricks for best displaying your photos
