## The latest in technology and innovation

For more than 25 years – and over 100 million installations around the world – Copeland Scroll compressors have been setting the standard for excellence. This line of compressors incorporates all of the latest advances, bringing you the quality and dependability that only Copeland Scroll technology can deliver. It includes 20 new design features, nine of them patented, that combine to offer:

### Added efficiency

- Optimized scroll and seal design
- High-efficiency motor

### Improved reliability

- Improved temperature protection
- Larger shaft-bearing system
- Internal pressure protection

### Quiet operation

- New shutdown solution
- Redesigned shell

Copeland Scroll compressors feature a variety of internal safety controls, designed to ensure proper actuation of the internal line-break motor protection. These safety features include:

- 1 Temperature operated disc – Features a bimetallic disc that senses discharge temperature and opens at approximately 270°F internal plenum temperature.
- 2 Internal pressure relief – Opens at approximately 400 +/- 50 pounds differential.
- 3 Floating seal – Separates the high side from the low side and also prevents the compressor from drawing into a vacuum, damaging the electrical terminal.
- 4 Internal motor protector – Senses both internal temperature and amperage. A tripped motor protector will exhibit a high shell temperature. Allow the compressor to cool to reset the motor protector.

The Copeland Scroll ZRKS compressor is designed for both residential and light commercial markets. It's also been optimized for post-2010 R-22 service and continued OEM system production for exports. Copeland Scroll ZRKS compressors use polyol ester (POE) lubricant to further increase application compatibility with both R-22 and hydrofluorocarbon (HFC) refrigerant applications like R-407C.
