Phylogenomic Data Acquisition W. Bryan Jennings, 2016-12-12 Phylogenomics is a rapidly growing field of study concerned with using genome wide data usually in the form of DNA sequence loci to infer the evolution of genes genomes and the Tree of Life Accordingly this discipline connects many areas in biology including molecular and genomic evolution systems biology molecular systematics phylogeography conservation genetics DNA barcoding and others With the advent of Next Generation Sequencing in addition to advances in computer hardware and software over the past decade researchers can now generate unparalleled phylogenomic datasets that are helping to illuminate many areas in the life sciences This book is an introduction to the principles and practices of gathering these data Phylogenomic Data Acquisition Principles and Practice is intended for a broad cross section of biologists and anyone else interested in learning how to obtain phylogenomic data using the latest methods

Bacterial Artificial Chromosomes Shaying Zhao, Marvin Stodolsky, 2008-02-03 Several developmental and historical threads are woven and displayed in these two volumes of Bacterial Artificial Chromosomes the first on Library Construction Physical Mapping and Sequencing and the second on Functional Studies The use of large insert clone libraries is the unifying feature with many diverse contributions The editors have had quite distinct roles Shaying Zhao has managed several BAC end sequencing projects Marvin Stodolsky during 1970 1980 contributed to the elucidation of the natural bacteriophage prophage P1 vector system Later he became a member of the Genome Task Group of the Department of Energy DOE through which support flowed

for most clone library resources of the Human Genome Program HGP Some important historical contributions are not represented in this volume This preface in part serves to mention these contributions and also briefly surveys historical developments Leon Rosner deceased contributed substantially in developing a PAC library for drosophila that utilized a P1 virion based encapsidation and transfection process This library served prominently in the Drosophila Genome Project collaboration PACs proved easy to purify so that they substantially replaced the YACs used earlier Much of the early automation for massive clone picking and processing was developed at the collaborating Lawrence Berkeley National Laboratory However the P1 virion encapsidation system itself was too fastidious and P1 virion based methods did not gain popularity in other genome projects
