*Channel Coding in Communication Networks* Alain Glavieux, 2013-03-01 This book provides a comprehensive overview of the subject of channel coding It starts with a description of information theory focusing on the quantitative measurement of information and introducing two fundamental theorems on source and channel coding The basics of channel coding in two chapters block codes and convolutional codes are then discussed and for these the authors introduce weighted input and output decoding algorithms and recursive systematic convolutional codes which are used in the rest of the book Trellis coded modulations which have their primary applications in high spectral efficiency transmissions are then covered before the discussion moves on to an advanced coding technique called turbocoding These codes invented in the 1990s by C Berrou and A Glavieux show exceptional performance The differences between convolutional turbocodes and block turbocodes are outlined and for each family the authors present the coding and decoding techniques together with their performances The book concludes with a chapter on the implementation of turbocodes in circuits As such anyone involved in the areas of channel coding and error correcting coding will find this book to be of invaluable assistance

**Channel Coding in Communication Networks** Alain Glavieux, 2014-05-14 This book starts with a description of information theory by focusing on the quantitative measurement of information and by introducing two fundamental theorems on source and channel coding It then discusses the basics of channel coding in two chapters the first devoted to block codes and the second to convolutional codes In these two chapters the authors introduce weighted input and output decoding algorithms and recursive systematic convolutional codes which are used in the rest of the book In part one the book covers trellis coded modulations which have their primary applications in high spectral efficiency transmissions Part two is devoted to an advanced coding technique called turbo codes These codes invented in the 1990s by C Berrou and A Glavieux show exceptional performance being at 0.35 dB of the Shannon theoretical limit The book distinguishes between convolutional turbo codes and block turbo codes and for each family the authors present the coding and decoding principles together with their performances The book concludes with a chapter on the implementation of turbo codes in circuits
