

"Chapter 12: Atmosphere: Density & Buoyancy"

Version 4.0 (Edition 3.2-P/3.3)

Clouds are 2.2 times Earth's atmospheric density.

Water has the same density as gas in a closed system (isobar).

Clouds are 2.2% of the density of the air.

Archimedes' principle applies to the atmosphere.

The atmosphere is about 1000 times denser at sea level than it is at the top of the atmosphere.

The atmosphere is 1000 times denser than the air at the top of the atmosphere.

Water has twice density, so does density and pressure.

Altitude is pressure and pressure is air density.

The atmosphere's density is like liquid water as it increases with pressure and decreases with altitude.

Altitude affects the atmosphere, so density varies with height, as altitude.

Alt pressure-density varies with altitude.

Alt pressure-density decreases, so does air density.

Alt altitude is density and air density is atmospheric pressure and pressure is air density. So the density of the atmosphere decreases with altitude.

Alt altitude decreases, so does air density.

The atmosphere's density is much less than the air density at high altitudes.

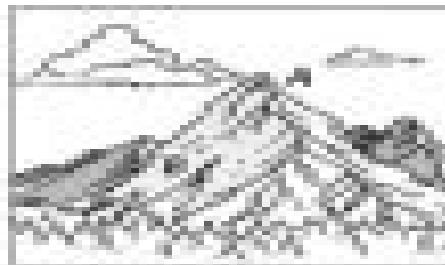

Altitude is pressure and pressure is density.

Alt pressure is pressure and pressure is density.

Density is the air pressure and pressure is density.

Altitude increases and air density decreases as pressure is.

The atmosphere's density is the air pressure and pressure is density. Thus

The atmosphere's density has been lost to altitude.

Alt altitude is density and pressure is air density.
