**14.1.** A rocket propellant manufacturer is studying the burning rate of propellant from three production processes. Four batches of propellant are randomly selected from the output of each process and three determinations of burning rate are made on each batch. The results follow. Analyze the data and draw conclusions.

Batch	Process 1				Process 2				Process 3			
	1	2	3	4	1	2	3	4	1	2	3	4

There is no significant effect on mean burning rate among the different processes; however, different batches from the same process have significantly different burning rates.

**14.2.** The surface finish of metal parts made on four machines is being studied. An experiment is conducted in which each machine is run by three different operators and two specimens from each operator are collected and tested. Because of the location of the machines, different operators are used on each machine, and the operators are chosen at random. The data are shown in the following table. Analyze the data and draw conclusions.
