### 40-1 Infectious Disease

- A disease is any change, other than injury, that disrupts the normal functions of the body
- Some diseases are inherited, others are caused by materials in the environment, and others are caused by agents such as bacteria, viruses, and fungi
- Disease causing agents are called pathogens
- The work of Louis Pasteur and Robert Koch led to the germ theory of disease, which states that infectious diseases are caused by microorganisms, or germs
- Koch's postulate, a series of guidelines still used today to identify the microorganisms that cause a specific disease:

- Viruses reproduce inside the host cell by using materials of the host cell to make copies of itself
- parasites are pathogens that live and feed inside infected organisms
- diseases are spread either by person to person contact, contaminated water or food, or infected animals
- STD's dangerous pathogens spread by sexual contact
- antibiotics kill bacteria without harming the cells of humans or animals

### 40-2 The Immune System
