Introduction to Computer Music Nick Collins, 2010-02-01 An up to date core undergraduate text Introduction to Computer Music deals with both the practical use of technology in music and the key principles underpinning the discipline It targets both musicians exploring computers and technologists engaging with music and does so in the confidence that both groups can learn tremendously from the cross disciplinary encounter It is designed to approach computer music as its own subject and strongly bridge the arts to computing divide benefiting and reconciling both musicians and computer scientists You will need little or no prior experience of computer programming itself and may not have an extensive background in mathematics or music but this highly engaging textbook will help you master many disciplines at once with a focus on both fascinating theories and exciting

practical applications      **From Content-based Music Emotion Recognition to Emotion Maps of Musical Pieces** Jacek Grekow, 2017-11-02 The problems it addresses include emotion representation annotation of music excerpts feature extraction and machine learning The book chiefly focuses on content based analysis of music files a system that automatically analyzes the structures of a music file and annotates the file with the perceived emotions Further it explores emotion detection in MIDI and audio files In the experiments presented here the categorical and dimensional approaches were used and the knowledge and expertise of music experts with a university music education were used for music file annotation The automatic emotion detection systems constructed and described in the book make it possible to index and subsequently search through music databases according to emotion In turn the emotion maps of musical compositions provide valuable new insights into the distribution of emotions in music and can be used to compare that distribution in different compositions or to conduct emotional comparisons of different interpretations of the same composition      Exploring Music Contents Solvi Ystad, Mitsuko Aramaki, Richard Kronland-Martinet, Kristoffer Jensen, 2011-10-05 This book constitutes the thoroughly refereed post proceedings of the 7th International Symposium on Computer Music Modeling and Retrieval CMMR 2010 held in M laga Spain in June 2010 The 22 revised full papers presented were specially reviewed and revised for inclusion in this proceedings volume The book is divided in five main chapters which reflect the present challenges within the field of computer music modeling and retrieval The chapters range from music interaction composition tools and sound source separation to data mining and music libraries One chapter is also dedicated to perceptual and cognitive aspects that are currently subject to increased interest in the MIR community      Proceedings of the 2008 Computer in Music Modeling and Retrieval Kristoffer (ed.)
