the case for free market capitalism From the Introduction by Llewellyn H Rockwell Jr The beauty of Cox s book comes from both its clear exposition and its brevity He offers only a few paragraphs on each topic but that is enough for people see both error and truth Sometimes just mapping out the logic beyond the gut reaction is enough to highlight an economic truth He does this for nearly all the topics that confront us daily Many people only have a moment That s why the guide is essential It is probably the shortest and soundest guide to economic logic in print May it be burned into the consciousness of every citizen now and in the future Summary of David A. notion of national output is at the heart of macroeconomics The total amount of output produced by a country constitutes its ultimate budget constraint A country can only use more output than it produces if it borrows the difference from foreigners 2 The most widely used measure of national output is gross domestic product which is the value of all the goods and services produced in an economy To avoid counting the same output more than once it is best to focus on the value added at each stage of production 3 The expenditure method is the standard approach to calculating GDP It is the market value of all final goods and services produced within a country over a given year Government officials typically divide expenditure on final goods and services into five categories consumption by households investment in productive assets government spending on goods and services exports and imports 4 GDP is the total output of a country and it is measured by focusing on national income National income is the amount paid to factors of production labor and capital for their services **The Concise**
