

D7

The control lever bracket is mounted on the inside of the right-hand seat riser and is held in place by the four bolts holding the riser to the rear. The rear cross plate and floor plate must be cut away for the control rod and lever.

D8

The control lever is mounted on the flywheel clutch control cross shaft just to the left of the gear shift housing. A part of the seat frame on the left-hand side must be cut away for the control rod.

**Note:** Since the single and double drum units are of the same basic design, there is little difference in the lubrication and maintenance requirements. The single drum unit can be considered as half of a double drum unit and serviced accordingly.

## LUBRICATION

Use a pure mineral transmission oil such as is used in the tractor transmission, in the gear compartment. An oil should be used that will not channel at existing operating temperatures. For temperatures above 32° F. (0° C.), use either an S.A.E. No. 90 or No. 140 oil. In extremely cold weather, an oil of lower viscosity—S.A.E. No. 80 may be required. In some instances, it may be necessary to dilute with engine oil.

Fill each worm gear compartment (1) and (2) to level of filler plug (3). Another similar plug is on the opposite side of the unit. Check oil level every 30 hours. Drain each compartment at (5), flush and refill every 900 hours.

**Caution:** Do not fill worm gear compartment above the level plug. Any excessive amount of oil at this point will tend to overflow into the clutch and brake compartment.
