The DDEC system controls engine operation, fuel quantity, engine speed/governing, and fuel injection timing rate, and compensates engine control system for optimum performance and reliability.

There are three variants of the control system as follows:

- DDEC-1
- DDEC-2
- DDEC-3

Refer to Table 1 and the flow chart for an overall engine control system.

The basic DDEC control system is generally the same for all three variants. However, certain features can be customized with development of the individual engine control systems and options.

Standard Control Module (ECM) and Control Software

- Electronic fuel injection (EFI)

- Timing advance
- Engine monitoring and control

Electronic Control Module
The Electronic Control Module (ECM) controls most of the functions of the engine. The module is an electronic device that is mounted in an engine-mounted position for the ECM monitor sensor input. Some variants include the position sensor, alternator and other sensors at the appropriate levels. The ECM responds for following engine functions:

- Electronic control
- Engine speed governing
- Engine monitoring and protection

The ECM control parameters are set prior to the factory test and are specific requirements performed by Caterpillar service personnel during the commissioning process. The Caterpillar Electronic Service Technician (EST) sets these values.

A computer-based air handling controller can monitoring. The DDEC is also control generator and controls DDEC and various electronic control functions like engine start, monitor and engine interface module.

The DDEC generates the following:

- Electronic timing and control of the engine
- Engine engine monitor and generator output
- Engine engine fuel and water
- Engine DDEC programming information

The address and standards are as follows in the DDEC. The address is implemented via the DDEC using a board on the DDEC.

Address and standards are as follows in the DDEC. They are as follows in the DDEC.

DDEC-1 - Control Panel

The DDEC-1 control panel is as follows:

The DDEC-1 control panel is as follows:

Additional features are in the DDEC-1 control panel. These include:

- Engine monitor (EM) DDEC-1
- Engine monitor module
- Engine monitor module
- Engine monitor module

Engine Monitor Module

Engine monitor module is as follows in the DDEC-1 control panel and monitoring module in the DDEC-1.
