[Virtual Product Creation in Industry](#) Rainer Stark, 2022-01-01 Today digital technologies represent an absolute must when it comes to creating new products and factories. However day to day product development and manufacturing engineering operations have still only unlocked roughly fifty percent of the digital potential. The question is why? This book provides compelling answers and remedies to that question. Its goal is to identify the main strengths and weaknesses of today's set up for digital engineering working solutions and to outline important trends and developments for the future. The book concentrates on explaining the critical basics of the individual technologies before going into deeper analysis of the virtual solution interdependencies and guidelines on how to best align them for productive deployment in industrial and collaborative networks. Moreover it addresses the changes needed in both technical and management skills in order to avoid fundamental breakdowns in running information technologies for virtual product
