Applications in Sheet Metal Forming Shailendra Kumar,Hussein M. A. Hussein,2016-10-25 This book comprises chapters on research work done around the globe in the area of artificial intelligence AI applications in sheet metal forming The first chapter offers an introduction to various AI techniques and sheet metal forming while subsequent chapters describe traditional procedures methods used in various sheet metal forming processes and focus on the automation of those processes by means of AI techniques such as KBS ANN GA CBR etc Feature recognition and the manufacturability assessment of sheet metal parts process planning strip layout design selecting the type and size of die components die

modeling and predicting die life are some of the most important aspects of sheet metal work. Traditionally these activities are highly experience based, tedious and time consuming. In response, researchers in several countries have applied various AI techniques to automate these activities, which are covered in this book. This book will be useful for engineers working in sheet metal industries and will serve to provide future direction to young researchers and students working in the area. **Sheet Metal Forming Processes** Dorel Banabic, 2010-06-21. The concept of virtual manufacturing has been developed in order to increase the industrial performances, being one of the most efficient ways of reducing the manufacturing times and improving the quality of the products. Numerical simulation of metal forming processes as a component of the virtual manufacturing process has a very important contribution to the reduction of the lead time. The finite element method is currently the most widely used numerical procedure for simulating sheet metal forming processes. The accuracy of the simulation programs used in industry is influenced by the constitutive models and the forming limit curves models incorporated in their structure. From the above discussion we can distinguish a very strong connection between virtual manufacturing as a general concept, finite element method as a numerical analysis instrument and constitutive laws as well as forming limit curves as a specificity of the sheet metal forming processes. Consequently, the material modeling is strategic when models of reality have to be built. The book gives a synthetic presentation of the research performed in the field of sheet metal forming simulation during more than 20 years by the members of three international teams: the Research Centre on Sheet Metal Forming CERTETA, Technical University of Cluj Napoca, Romania; AutoForm Company from Zürich, Switzerland; and VOLVO automotive company from Sweden. The first chapter presents an overview of different Finite Element (FE) formulations used for sheet metal forming simulation now and in the past.

Process Design for Sheet Metal Forming Using Process Simulation Techniques

Parth Pathak, 2008. Practical example of application of FE simulation is presented for designing new forming process for an industrial sheet metal part.

New developments in sheet metal forming - Hydroforming of sheets, tubes and profiles

Mathias Liewald, 2016. **Sheet Metal Forming Processes and Die Design** Vukota Boljanovic, 2004. This book is a complete modern guide to sheet metal forming processes and die design, still the most commonly used methodology for the mass production manufacture of aircraft, automobiles and complex high precision parts. It illustrates several different approaches to this intricate field by taking the reader through the 'hows and whys' of product analysis as well as the techniques for blanking, punching, bending, deep drawing, stretching, material economy, strip design, movement of metal during stamping and tooling.

Modeling of Sheet Metal Forming Sing C. Tang, Jwo Pan, 2007-04-10. **Theories, Methods and Numerical Technology**

of Sheet Metal Cold and Hot Forming Ping Hu, Ning Ma, Li-zhong Liu, Yi-guo Zhu, 2012-07-23. Over the last 15 years the application of innovative steel concepts in the automotive industry has increased steadily. Numerical simulation technology of

hot forming of high strength steel allows engineers to modify the formability of hot forming steel metals and to optimize die design schemes. Theories, Methods and Numerical Technology of Sheet Metal Cold and Hot Forming focuses on hot and cold forming theories, numerical methods, relative simulation and experiment techniques for high strength steel forming and die design in the automobile industry. Theories, Methods and Numerical Technology of Sheet Metal Cold and Hot Forming introduces the general theories of cold forming, then expands upon advanced hot forming theories and simulation methods, including the forming process, constitutive equations, hot boundary constraint treatment and hot forming equipment and experiments. Various calculation methods of cold and hot forming based on the authors' experience in commercial CAE software for sheet metal forming are provided, as well as a discussion of key issues such as hot formability with quenching process, die design and cooling channel design in die and formability experiments. Theories, Methods and Numerical Technology of Sheet Metal Cold and Hot Forming will enable readers to develop an advanced knowledge of hot forming, as well as to apply hot forming theories, calculation methods and key techniques to direct their die design. It is therefore a useful reference for students and researchers, as well as automotive engineers.

New Developments in Sheet Metal Forming 2020 Mathias Liewald, 2020 *Sheet Metal Forming and Formability*, 1972 **Sheet Metal Forming** Frédéric Barlat, Ming Li, 2000 **Sheet Metal Forming Simulation Using Explicit Finite Element Methods** Karl Brian Nielsen, 2000 Sheet Metal Forming Optimization Ganesh M. Kakandikar, Vilas M. Nandedkar, 2017-10-16. Automotive and aerospace components, utensils and many other products are manufactured by a forming/drawing process on press machines of very thin sheet metal (0.8 to 1.2 mm). It is imperative to study the effect of all involved parameters on output of this type of manufacturing process. This book offers the readers with application and suitability of various evolutionary, swarm and bio-inspired optimization algorithms for sheet metal forming processes. Book initiates by presenting basics of metal forming formability followed by discussion of process parameters in detail, prominent modes of failure, basics of optimization and various bioinspired approaches followed by optimization studies on various industrial components applying bioinspired optimization algorithms. Key Features: Focus on description of basic investigation of metal forming as well as evolutionary optimization; Presentation of innovative optimization methodologies to close the gap between those formulations and industrial problems aimed at industrial professionals; Includes mathematical modeling of drawing/forming process; Discusses key performance parameters such as Thinning, Fracture and Wrinkling; Includes both numerical and experimental analysis.
