These coordinates are obtained by doing field surveys collecting coordinates with a GPS device for few easily identifiable features in the image or map. In case of digitize scanned maps the coordinates can be obtained from the markings on the map image itself. Using these sample coordinates or GCPs Ground Control Points the image is warped and made to fit within the chosen coordinate system. *Manual of Geographic Information Systems* Marguerite Madden, 2009 This volume is designed to be a comprehensive resource on GIS for students, researchers and practitioners who are interested in asking spatial questions, assessing landscapes, building geodatabases and envisioning a world of integrated geospatial technologies.
