**HENRY CAVENDISH**

1. Henry Cavendish, the eldest son of Lord Charles Cavendish, was born at Nice in 1731. From a school at Hackney, he entered Cambridge in 1749. He devoted his whole life to scientific investigation and became a first-rate physicist and chemist. An uncle of his left him a large amount of money and this enabled Cavendish to carry on his work without any interruption.
2. Cavendish was one of the pioneers in the study of gases. In 1766 he discovered 'inflammable air', now called 'hydrogen'. Later he showed that water was produced when this gas was burnt. In 1785, he discovered that nitric acid was produced by the combination of the two constituent gases of the atmosphere, oxygen and nitrogen. The discovery has since become immensely important in industry, especially in the manufacture of fertilizers. In the course of this experiment he made the remarkable observation that a very small fraction, about 1/120th of the air, was different from the rest of it. Thus Cavendish had observed but not recognized the gas that was rediscovered more than a hundred years later and was given the name Argon.
3. In addition to the above discoveries, Cavendish made notable discoveries in electrostatics.
