**Design of Modern Heuristics** Franz Rothlauf, 2011-07-17 Most textbooks on modern heuristics provide the reader with detailed descriptions of the functionality of single examples like genetic algorithms genetic programming tabu search simulated annealing and others but fail to teach the underlying concepts behind these different approaches The author takes a different approach in this textbook by focusing on the users needs and answering three fundamental questions First he tells us which problems modern heuristics are expected to perform well on and which should be left to traditional optimization methods Second he teaches us to systematically design the right modern heuristic for a particular problem by providing a coherent view on design elements and working principles Third he shows how we can make use of problem specific knowledge for the design of efficient and effective modern heuristics that solve not only small toy problems but also perform well on large real world problems This book is written in an easy to read style and it is aimed at students and practitioners in computer science operations research and information systems who want to understand modern heuristics and are interested in a guide to their systematic design and use This book is written in an easy to read style and it is aimed at students and practitioners in computer science operations research and information systems who want to understand modern heuristics and are interested in a guide to their systematic design and use This book is written in an easy to read style and it is aimed at students and practitioners in computer science operations research and information systems who want to understand modern heuristics and are interested in a guide to their systematic design and use

Subrahmanian,Vipin

Swarup,Cliff Wang,Michael Wellman,2020-02-04 This book explores fundamental scientific problems essential for autonomous cyber defense Specific areas include Game and control theory based moving target defenses MTDs and adaptive cyber defenses ACDs for fully autonomous cyber operations The extent to which autonomous cyber systems can be designed and operated in a framework that is significantly different from the human based systems we now operate On line learning algorithms including deep recurrent networks and reinforcement learning for the kinds of situation awareness and decisions that autonomous cyber systems will require Human understanding and control of highly distributed autonomous cyber defenses Quantitative performance metrics for the above so that autonomous cyber defensive agents can reason about the situation and appropriate responses as well as allowing humans to assess and improve the autonomous system This book establishes scientific foundations for adaptive autonomous cyber systems and ultimately brings about a more secure and reliable Internet The recent advances in adaptive cyber defense ACD have developed a range of new ACD techniques and methodologies for reasoning in an adaptive environment Autonomy in physical and cyber systems promises to revolutionize cyber operations The ability of autonomous systems to execute at scales scopes and tempos exceeding those of humans and human controlled systems will introduce entirely new types of cyber defense strategies and tactics especially in highly contested physical and cyber environments The development and automation of cyber strategies that are responsive to autonomous adversaries pose basic new technical challenges for cyber security This book targets cyber security professionals and researchers industry governments and military Advanced level students in computer science and information systems will also find this book useful as a secondary textbook

**Nature-Inspired Algorithms for Optimisation** Raymond Chiong,2009-04-28 Nature Inspired Algorithms have been gaining much popularity in recent years due to the fact that many real world optimisation problems have become increasingly large complex and dynamic The size and complexity of the problems nowadays require the development of methods and solutions whose efficiency is measured by their ability to find acceptable results within a reasonable amount of time rather than an ability to guarantee the optimal solution This volume Nature Inspired Algorithms for Optimisation is a collection of the latest state of the art algorithms and important studies for tackling various kinds of optimisation problems It comprises 18 chapters including two introductory chapters which address the fundamental issues that have made optimisation problems difficult to solve and explain the rationale for seeking inspiration from nature The contributions stand out through their novelty and clarity of the algorithmic descriptions and analyses and lead the way to interesting and varied new applications
