Internet exercises are also integrated throughout the text.

It includes methods for the enumeration of indicator microorganisms, of general contamination indicators of hygiene and sanitary conditions, sporeforming spoilage fungi and pathogenic bacteria. Every chapter begins with a comprehensive in-depth and updated bibliographic reference on the microorganism(s) dealt with in that particular section of the book. The latest facts on the taxonomic position of each group, genus or species are given as well as clear guidelines on how to deal with changes in nomenclature on the internet. All chapters provide schematic comparisons between the methods presented, highlighting the main differences and similarities. This allows the user to choose the method that best meets his/her needs. Moreover, each chapter lists validated alternative quick methods which, though not described in the book, may and can be used for the analysis of the microorganism(s) dealt with in that particular chapter. The didactic setup and the visualization of procedures in step-by-step schemes allow the user to quickly perceive and execute the procedure intended. Support material such as drawings, procedure schemes and laboratory sheets are available for downloading and customization. This compendium will serve as an up-to-date practical companion for laboratory professionals, technicians and research scientists, instructors, teachers and food and water analysts. Alimentary engineering, chemistry, biotechnology and biology under graduate students specializing in food sciences will also find the book beneficial. It is furthermore suited for use as a practical laboratory manual for graduate courses in Food Engineering and Food Microbiology.
