**Mathematics** Alexander I. Kheyfits, 2016-11-20 A text in elementary mathematics for high school graduates preparing for college and for college students enrolled in any remedial or developmental mathematics class Expectation Gaps Between High School Mathematics Courses and College Calculus, 2020 As a tutor at the Science and Math Learning Center SMLC at James Madison University JMU I have seen a disconnect between students preparation from their high school math classes and their application of particular topics in higher level math classes i.e. Calculus I As a future high school math teacher I wanted to investigate the expectation gap between high school and college math classes I observed a Calculus I class during the first week of classes to determine the students initial struggles I finally landed on the topic of logarithms and specifically the rules associated with them I conducted a survey in the same Calculus I class and collected data on the students college and high school math classes and grades other university math classes and grades and their current and expected grade in the class I also presented a problem for them to solve requiring logarithmic differentiation to determine their ability to apply a high school math topic in a Calculus I setting I took the responses from the problem and compared them to the other data collected to see if interesting patterns arose to determine if there was a disconnect between high school math classes and the application of those topics in college math classes I ultimately focused on the freshmen in the class for my analysis because they are the closest removed from high school In addition the majority of the participants from the Calculus I class were freshmen From my analysis I observed that many freshmen did well in their Algebra II courses in high school when logarithms are taught but most were struggling with applying the rules of logarithms to answer the question on the survey

**Standards-based School Mathematics Curricula** Sharon L. Senk, Denise R. Thompson, 2020-07-24 The Curriculum and Evaluation Standards for School Mathematics published by the National Council of Teachers of Mathematics in 1989 set forth a broad vision of mathematical content and pedagogy for grades K-12 in the United States These Standards prompted the development of Standards based mathematics curricula What features characterize Standards based curricula How well do such curricula work To answer these questions the editors invited researchers who had investigated the implementation of 12 different Standards based mathematics curricula to describe the effects of these curricula on students learning and achievement and to provide evidence for any claims they made In particular authors were asked to identify content on which performance of students using Standards based materials differed from that of students using more traditional materials and content on which performance of these two groups of students was virtually identical Additionally four scholars not involved with the development of any of the materials were invited to write critical commentaries on the work reported in the other chapters Section I of Standards Based School Mathematics Curricula provides a historical background to place the current curriculum reform efforts in perspective a summary of recent recommendations to reform school mathematics and a discussion of issues that arise when conducting research on student outcomes Sections II, III, and IV are devoted to research on mathematics curriculum projects for elementary middle and high schools respectively The final section is a commentary by Jeremy

Kilpatrick Regents Professor of Mathematics Education at the University of Georgia on the research reported in this book It provides a historical perspective on the use of research to guide mathematics curriculum reform in schools and makes additional recommendations for further research In addition to the references provided at the end of each chapter other references about the Standards based curriculum projects are provided at the end of the book This volume is a valuable resource for all participants in discussions about school mathematics curricula including professors and graduate students interested in mathematics education curriculum development program evaluation or the history of education educational policy makers teachers parents principals and other school administrators The editors hope that the large body of empirical evidence and the thoughtful discussion of educational values found in this book will enable readers to engage in informed civil discourse about the goals and methods of school mathematics curricula and related research      **High School Math**
