Compiler Design in C Allen I. Holub,1990 Software Programming Languages *Compiler Design and Construction* Arthur B. Pyster,1988 Software Programming Languages **A Retargetable C Compiler** David Hanson,1995-01-01 *A Retargetable C Compiler* Christopher W. Fraser,David R. Hanson,1995 This book brings a unique treatment of compiler design to the professional who seeks an in depth examination of a real world compiler Chris Fraser of AT a target independent front end and three target dependent back ends are packaged as a single program designed to run on three different platforms Rather than transfer code into a text file the book and the compiler itself are generated from a single source to ensure accuracy Modern Compiler Implementation in Java Andrew W. Appel,2002-10-21 This textbook describes all phases of a compiler lexical analysis parsing abstract syntax semantic actions intermediate representations instruction selection via tree matching dataflow analysis graph coloring register allocation and runtime systems It includes good coverage of current techniques in code generation and register allocation as well as the compilation of functional and object oriented languages that is missing from most books The most accepted and successful techniques are described concisely rather than as an exhaustive catalog of every possible variant and illustrated with actual Java classes This second edition has been extensively rewritten to include more discussion of Java and object oriented programming concepts such as visitor patterns A unique feature is the newly redesigned compiler project in Java for a subset of Java itself The project includes both front end and back end phases so that students can build a complete working compiler in one semester

Communicating Process Architectures 2005 J.F. Broenink,H.W. Roebbers,J.P.E. Sunter,2005-09-09 Modern computing systems work when all components are correct by design and can be combined to achieve scalability This publication offers refereed papers covering various aspects such as system design and implementation tools concurrent programming languages libraries and run time kernels and formal methods and applications *A Small C Compiler* James E. Hendrix,1988 **Modern Compiler Implementation in C** Andrew W. Appel,Jens Palsberg,2000 This new expanded textbook describes all phases of a modern compiler lexical analysis parsing abstract syntax semantic actions intermediate representations instruction selection via tree matching dataflow analysis graph coloring register allocation and runtime systems It includes good coverage of current techniques in code generation and register allocation as well as functional and object oriented languages that are missing from most books In addition more advanced chapters are now included so that it can be used as the basis for a two semester or graduate course The most accepted and successful techniques are described in a concise way rather than as an exhaustive catalog of every possible variant Detailed descriptions of the interfaces between modules of a compiler are illustrated with actual C header files The first part of the book Fundamentals of Compilation is suitable for a one semester first course in compiler design The second part Advanced Topics which includes the advanced chapters covers the compilation of object oriented and functional languages garbage collection loop
