Computer Science Undergraduate Project Guide:

Projects in Computing and Information Systems Christian Dawson, 2015 Dawson walks graduate and undergraduate students through the process of a research project in computing and information science marking sections that are specific to advance graduate research The stages she identifies are the background setting a project's foundation conducting the research presenting the results and the future Among the topics are research choosing a project and writing a proposal literature searching and literature reviews presenting results in written form and final considerations

Managing Your Software Project Ian Ricketts, 2012-12-06 About this Book I wrote this book to help students who are about to start their first project It provides guidance on how to organise your work so that you achieve your agreed objective The advice is based on experience gained from supervising more than 50 successful student projects in both engineering and computer science during the last 10 years Projects have varied in duration from 120 hour final year undergraduate projects through 800 hour MSc projects and up to 5000 hour PhD student research projects It is my experience that almost all students have the technical background to a greater or lesser extent to complete their assigned project but that a disappointingly large number lack the basic organisational framework Once they are introduced to the rudiments of project management then they are better equipped to control their own progress They can also concentrate their efforts more effectively on the technical challenges which they will inevitably meet Of course you can improve your skills solely on the basis of personal experience but you are more likely to achieve your objectives in a timely manner with the help of an experienced guide That is what I have tried to include within this book It contains advice on how to solve some of the organisational challenges common to all projects so that you can successfully complete your project

Resources in Education, 1982 *Thesis Projects* Mikael Berndtsson, Jörgen Hansson, B. Olsson, Björn Lundell, 2007-10-30 Any B Sc or M Sc study programme in the computing discipline typically ends with a capstone project A capstone project builds and tests the skills and the knowledge acquired during the education and is an essential part of the training towards becoming a professional There is a large number of different terms for these types of projects capstone project senior project final year project B Sc M Sc thesis project etc In this book we will use the term thesis project and in some cases for the sake of simplicity just project This book focuses on thesis projects within the computing discipline Thus the type of project discussed in this book is in line with the capstone format described in the ACM IEEE Computing Curricula 2001 Computer Science p 53 an alternative capstone format is a research experience that includes some original work a review of the scientific literature and an investigation of a proposed solution followed by a scientific paper and or an oral presentation of the results It is important to remember that these are undergraduates and be realistic about the amount and quality of research expected Even so it may be more worthwhile to expose outstanding students to the challenges of research than to have them design and build yet another program In this book we present a process for conducting thesis projects with the research orientation described in the quote above

Success in Your Project Philip Weaver,2003-12-18 Final year projects are an important feature of most undergraduate and postgraduate degrees in the fields of Business Information Technology Information Systems Software Engineering and Business Computing These projects usually involve students in the practical application of theory together with a critical analysis or evaluation of the execution of their project or of the theory applied This book is the first to provide detailed guidance and support for students in preparing for conducting and evaluating a system development project independent of the development methodology or technical tools to be used

Handbook of Research on Achieving Sustainable Development Goals With Sustainable Marketing Gigauri, Iza,Palazzo, Maria,Ferri, Maria Antonella,2023-06-26 The prominent idea of sustainable development has influenced almost all disciplines changing our understanding and behavior toward sustainability In this respect marketing has also been transforming from the sustainability point of view as emerging social and ecological problems caused by the exponential growth require sustainable solutions and joint efforts Sustainable marketing intends to integrate ecological social and ethical concerns while creating value Consumers along with other stakeholders expect that brands will contribute to work toward the sustainable development goals therefore companies need to redesign their marketing initiatives to create promote and deliver values that are in line with sustainability The Handbook of Research on Achieving Sustainable Development Goals With Sustainable Marketing illuminates current developments in sustainable marketing and the new trends and tendencies concerning the concept in theory and practice The book also explores the concept of sustainable marketing in today s context of the digital age explains its boundaries and benefits and describes the challenges and opportunities as well as the advantages and potential disadvantages of sustainable marketing and branding efforts Covering key topics such as branding marketing ethics and corporate social responsibility this premier reference source is ideal for marketers business owners managers industry professionals researchers academicians scholars practitioners instructors and students
