

# Computer Terminology

## INTRODUCTION

The computer is a machine that can store and process information. It is a device that can be programmed to perform a wide range of tasks, from simple calculations to complex data processing. The computer is a versatile tool that has revolutionized the way we live and work.

## COMPUTER HARDWARE

Computer hardware refers to the physical components of a computer system. These components include the central processing unit (CPU), memory, storage devices, and input/output devices. The hardware is the foundation upon which the software is built.

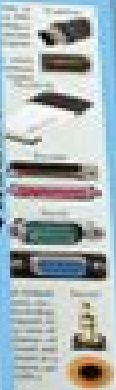

The central processing unit (CPU) is the brain of the computer. It is responsible for executing instructions and performing calculations. The CPU is made up of several components, including the arithmetic logic unit (ALU), the control unit, and the register file.

Memory is the part of the computer that stores data and instructions. It is divided into two main types: random access memory (RAM) and read-only memory (ROM). RAM is used for temporary storage, while ROM is used for permanent storage.

Storage devices are used to store data for long periods of time. Examples of storage devices include hard drives, floppy disks, and compact discs. Input/output devices are used to interact with the computer. Examples of input/output devices include keyboards, mice, and monitors.

Device	Full Name	Description
CPU	Central Processing Unit	The brain of the computer, responsible for executing instructions.
RAM	Random Access Memory	Temporary storage for data and instructions.
ROM	Read-Only Memory	Permanent storage for data and instructions.
Hard Drive	Hard Disk Drive	Storage device for long-term data storage.
Floppy Disk	3.5-inch Floppy Disk	Removable storage device.
Compact Disc	Compact Disc Digital Audio (CD-DA)	Removable storage device for audio data.
Keyboard	Computer Keyboard	Input device for text entry.
Mouse	Computer Mouse	Input device for pointing and clicking.
Monitor	Computer Monitor	Output device for displaying visual information.

Input devices are used to provide data to the computer. Examples of input devices include keyboards, mice, and touchscreens. Output devices are used to display data from the computer. Examples of output devices include monitors, printers, and speakers.

## COMPUTER SOFTWARE

Computer software refers to the programs and instructions that tell the computer what to do. Software is divided into two main categories: system software and application software. System software is responsible for managing the computer's resources, while application software is used to perform specific tasks.

System software includes the operating system, which is the program that manages the computer's hardware and provides a platform for other software to run. Examples of operating systems include Windows, Mac OS, and Linux.

Application software is used to perform specific tasks, such as word processing, spreadsheet management, and database management. Examples of application software include Microsoft Word, Microsoft Excel, and Microsoft Access.

The operating system is the most important piece of software on a computer. It is responsible for managing the computer's resources, such as memory and the CPU. The operating system also provides a user interface, which allows the user to interact with the computer.

Application software is designed to perform specific tasks. Examples of application software include word processors, spreadsheets, and databases. Application software is often developed by third-party companies, such as Microsoft and Apple.

Software is often distributed in the form of a program file. This file contains the instructions that tell the computer what to do. Software can be installed on a computer, which allows the user to run the program.

Software is often updated to add new features or to fix bugs. Users should keep their software up to date to ensure that they are getting the most out of their computer. Updates are often available for free, but some may require a purchase.

Software is often stored on a hard drive or a floppy disk. Users should back up their software regularly to prevent data loss. Backups should be stored in a safe place, away from the computer.

Software is often used to create documents, spreadsheets, and databases. Users should learn how to use the software they are using to get the most out of their computer. There are many resources available to help users learn how to use software, including tutorials and manuals.

Software	Full Name	Description
Windows	Microsoft Windows	Operating system for personal computers.
Mac OS	Macintosh Operating System	Operating system for Macintosh computers.
Linux	Linux Operating System	Open-source operating system for servers and desktops.
Microsoft Word	Microsoft Word	Word processing software.
Microsoft Excel	Microsoft Excel	Spreadsheet management software.
Microsoft Access	Microsoft Access	Database management software.
Adobe Photoshop	Adobe Photoshop	Image editing software.
AutoCAD	Autodesk AutoCAD	Computer-aided design (CAD) software.
Oracle Database	Oracle Database	Database management software.
IBM DB2	IBM DB2	Database management software.
Microsoft SQL Server	Microsoft SQL Server	Database management software.
