The papers are organized in topical sections on queueing theory, software and computer systems, statistics and inference, telecommunication networks and performance and reliability.

Intelligent Technologies for Internet of Vehicles Naercio Magaia, George Mastorakis, Constantinos Mavromoustakis, Evangelos Pallis, Evangelos K. Markakis, 2021-06-09 This book gathers recent research works in emerging Artificial Intelligence AI methods for the convergence of communication, caching, control and computing resources in cloud-based Internet of Vehicles IoV infrastructures. In this context, the book's major subjects cover the analysis and the development of AI-powered mechanisms in future IoV applications and architectures. It addresses the major new technological developments in the field and reflects current research trends and industry needs. It comprises a good balance between theoretical and practical issues, covering case studies, experience and evaluation reports, and best practices in utilizing AI applications in IoV networks. It also provides technical scientific information about various aspects of AI technologies, ranging from basic concepts to research-grade material, including future directions. This book is intended for researchers, practitioners, engineers, and scientists involved in designing and developing protocols and AI applications and services for IoV-related devices.

Operating System Concepts Abraham Silberschatz, Peter B. Galvin, Greg Gagne, 2005 This new seventh edition of the book has been brought up to date to include recent developments in operating systems such as Windows XP and the new small footprint operating systems that work in hand-held devices such as the Palm and in cell phones. Most of the book is on general-purpose operating systems such as Linux and those from Microsoft. But at the end of the book, there are chapters on other types of operating systems such as Real-Time Operating Systems and MultiMedia OS's. Finally, there are some chapters which the authors call case studies. In these, one chapter goes into a detailed discussion of Linux, another chapter covers Windows XP. Chapter 23 covers several early operating systems that helped to define the features that make up modern OS's. These include Atlas, XDS 940, THE, RC 4000, CTSS, MULTICS, OS 360, and MACH, along with brief mentions of several others. Note that this is not a book on how to use operating systems; this is a book on how operating systems are designed. It is intended for upper-level undergraduate students or first-year graduate students.

Computer Networking: A Top-Down Approach, Global Edition James F. Kurose, Keith Ross, 2021-06-07 This print textbook is available for students to rent for their classes. The Pearson print rental program provides students with affordable access to learning materials so they come to class ready to succeed. A top-down layered approach to computer networking.
