

## Answers and Explanations - Conceptual Physics Questions

### 1. 1. C) It continues moving at constant velocity

Explanation: According to Newton's First Law, an object in motion remains in motion unless acted upon by an external force. Since no external force is acting, the spacecraft will keep moving at constant velocity.

### 2. 2. B) The force from the ground on the horse is unbalanced

Explanation: The horse moves forward because it pushes backward on the ground, and the ground pushes forward on the horse due to Newton's Third Law.

### 3. 3. C) It remains constant

Explanation: In free fall, the only force acting is gravity, which provides a constant acceleration of  $9.8 \text{ m/s}^2$  downward.

### 4. 4. C) The applied force equals the friction force

Explanation: Since the box moves at constant velocity, there is no net force, meaning the applied force must balance the frictional force.

### 5. 5. A) Increases

Explanation: The acceleration down an incline is given by  $g \cdot \sin(\theta)$ . As the incline angle  $\theta$  increases,  $\sin(\theta)$  increases, leading to greater acceleration.

### 6. 6. C) Both exert equal forces on each other

Explanation: By Newton's Third Law, the car and truck exert equal and opposite forces on each other during a collision.

### 7. 7. C) It moves slightly backward

Explanation: By Newton's Third Law, when the person jumps forward, the boat experiences an equal and opposite reaction force moving it backward.

### 8. 8. B) Slow down

Explanation: A force opposite to motion causes negative acceleration (deceleration), reducing the object's speed.

*From Atoms to Galaxies* Sadri Hassani, 2011-06-13 College students in the United States are becoming increasingly incapable of differentiating between proven facts delivered by scientific inquiry and the speculations of pseudoscience In an effort to help stem this disturbing trend *From Atoms to Galaxies A Conceptual Physics Approach to Scientific Awareness* teaches heightened scientific acuity as it educates students about the physical world and gives them answers to questions large and small Written by Sadri Hassani the author of several mathematical physics textbooks this work covers the essentials of modern physics in a way that is as thorough as it is compelling and accessible Some of you might want to know How did Galileo come to think about the first law of motion Did Newton actually discover gravity by way of an apple and an accident Or maybe you have mulled over Is it possible for Santa Claus to deliver all his toys Is it possible to prove that Elvis does not visit Graceland every midnight Or perhaps you've even wondered If ancient Taoism really parallels modern physics If psychoanalysis can actually be called a science How it is that some philosophies of science may imply that a 650 year old woman can give birth to a child No Advanced Mathematics Required A primary textbook for undergraduate students not majoring in physics *From Atoms to Galaxies* examines physical laws and their consequences from a conceptual perspective that requires no advanced mathematics It explains quantum physics relativity nuclear and particle physics gauge theory quantum field theory quarks and leptons and cosmology Encouraging students to subscribe to proven causation rather than

dramatic speculation the book Defines the often obscured difference between science and technology discussing how this confusion taints both common culture and academic rigor Explores the various philosophies of science demonstrating how errors in our understanding of scientific principles can adversely impact scientific awareness Exposes how pseudoscience and New Age mysticism advance unproven conjectures as dangerous alternatives to proven science Based on courses taught by the author for over 15 years this textbook has been developed to raise the scientific awareness of the untrained reader who lacks a technical or mathematical background To accomplish this the book lays the foundation of the laws that govern our universe in a nontechnical way emphasizing topics that excite the mind namely those taken from modern physics and exposing the abuses made of them by the New Age gurus and other mystagogues It outlines the methods developed by physicists for the scientific investigation of nature and contrasts them with those developed by the outsiders who claim to be the owners of scientific methodology Each chapter includes essays which use the material developed in that chapter to debunk misconceptions clarify the nature of science and explore the history of physics as it relates to the development of ideas Noting the damage incurred by confusing science and technology the book strives to help the reader to emphatically demarcate the two while clearly demonstrating that science is the only element capable of advancing technology Sears and Zemansky's University Physics Hugh D.
