## Climate Wizard Manual:

**Climate Change Adaptation Manual** Andrea Prutsch, Torsten Grothmann, Sabine McCallum, Inke Schauser, Rob Swart, 2014-02-24 Due to the lack of success in climate change mitigation efforts the importance of adaptation is becoming more and more apparent and is now one of the main imperatives of international research and action. However research on adaptation is mostly not directly applicable to adaptation policy or practice leaving a gap between scientific results and practical advice for decision makers and planners. This book seeks to address this problem and bridge the gap and should provide readers with practical and applicable information on climate change adaptation. Following an introduction the book is organised into four main sections each reflecting an essential component in the adaptation process. Climate change adaptation is an emerging subject area and has gained increased political and academic attention within the last decade. Whereas most books in the field focus on adaptation in developing countries this volume provides an examination of predominantly European policy and offers interdisciplinary insight into cutting edge knowledge and lessons learnt in a relatively new field of implementation.

**Community-Based Adaptation to Climate Change** E. Lisa F. Schipper, Jessica Ayers, Hannah Reid, Saleemul Huq, Atiq Rahman, 2014-01-21 As climate change adaptation rises up the international policy agenda matched by increasing funds and frameworks for action there are mounting questions over how to ensure the needs of vulnerable people on the ground are met. Community based adaptation (CBA) is one growing proposal that argues for tailored support at the local level to enable vulnerable people to identify and implement appropriate community based responses to climate change themselves. Community Based Adaptation to Climate Change Scaling it up explores the challenges for meeting the scale of the adaptation challenge through CBA. It asks the fundamental questions: How can we draw replicable lessons to move from place based projects towards more programmatic adaptation planning? How does CBA fit with larger scale adaptation policy and programmes? How are CBA interventions situated within the institutions that enable or undermine adaptive capacity? Combining the research and experience of prominent adaptation and development theorists and practitioners this book presents cutting edge knowledge that moves the debate on CBA forward towards effective appropriate and scaled up adaptive action.

**Climate Change and Development** Thomas Tanner, Leo Horn-Phathanothai, 2014-01-10 The evidence for human induced climate change is now overwhelming the brunt of its impacts is already being felt by poor people and the case for urgent action is compelling. This book addresses the two greatest challenges of our time: averting catastrophic climate change and eradicating poverty and the close interconnections between them. Climate Change and Development provides a comprehensive and multi disciplinary foundation for understanding the complex and tangled relationship between development and climate change. It argues that transformational approaches are required in order to reconcile poverty reduction and climate protection and secure sustained prosperity in the twenty first century. Section One provides the building blocks for understanding climate science and the nexus between climate and

development Section Two outlines responses to climate change from the perspective of developing countries with chapters on international agreements climate change mitigation and adaptation and climate finance Each chapter offers analytical tools for evaluating responses enabling readers to ask smart questions about the climate change and development nexus as policy and action evolve in the coming years The last three chapters of the book contained in Section Three are forward looking and focus on why and how development must be re framed to deliver more equitable and sustainable outcomes This section sets out different critiques of development as usual and explores alternative paradigms of development in a warming and resource constrained world This is an invaluable and clearly written text that uses real world examples to bring to life perspectives from across different disciplines It also contains chapter learning outcomes and end of chapter summaries discussion questions and suggestions for further reading and relevant websites The text is suitable for both undergraduate and postgraduate students as well as those working in international development contexts who wish to get to grips with this pressing global challenge
