Dimstri Astro Physics:

Optics in Astrophysics Renaud Foy, Françoise Claude Foy, 2005-12-07 Astrophysics is facing challenging aims such as deep cosmology at redshift higher than 10 to constrain cosmology models or the detection of exoplanets and possibly terrestrial exoplanets and several others It requires unprecedented ambitious R D programs which have definitely to rely on a tight cooperation between astrophysics and optics communities The book addresses most of the most critical interdisciplinary domains where they interact or where they will do A first need is to collect more light i e telescopes still larger than the current 8 10 meter class ones Decametric and even hectometric optical from UV to IR wavelengths telescopes are being studied Whereas up to now the light collecting surface of new telescopes was approximately 4 times that of the previous generation now this factor is growing to 10 to 100 This quantum leap urges to implement new methods or technologies developed in the optics community both in academic labs and in the industry Given the astrophysical goals and technological constraints new generation adaptive optics with a huge number of actuators and laser guide stars devices have to be developed from theoretical bases to experimental works Two other newcomers in observational astrophysics are interferometric arrays of optical telescopes and gravitational wave detectors Up to date reviews of detectors and of spectrographs are given as well as forefront R D in the field of optical coatings and of guided optics Possible new ways to handle photons are also addressed based on quantum physics More and more signal processing algorithms are a part and parcel of any modern instrumentation Thus finally the book gives two reviews about wavefront processing and about image restoration and deconvolution algorithms for ill conditioned cases

Exoplanet Science Strategy National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Board on Physics and Astronomy, Space Studies Board, Committee on Exoplanet Science Strategy, 2019-01-17 The past decade has delivered remarkable discoveries in the study of exoplanets Hand in hand with these advances a theoretical understanding of the myriad of processes that dictate the formation and evolution of planets has matured spurred on by the avalanche of unexpected discoveries Appreciation of the factors that make a planet hospitable to life has grown in sophistication as has understanding of the context for biosignatures the remotely detectable aspects of a planet's atmosphere or surface that reveal the presence of life Exoplanet Science Strategy highlights strategic priorities for large coordinated efforts that will support the scientific goals of the broad exoplanet science community This report outlines a strategic plan that will answer lingering questions through a combination of large ambitious community supported efforts and support for diverse creative community driven investigator research

The Impact of Binary Stars on Stellar Evolution Giacomo Beccari, Henri M. J. Boffin, 2019-04-18 Stars are mostly found in binary and multiple systems with at least 50% of all solar like stars having companions this fraction approaches 100% for the most massive stars A large proportion of these systems interact and alter the structure and evolution of their components leading to exotic objects such as Algol variables blue stragglers and other chemically peculiar stars but also to

phenomena such as non spherical planetary nebulae supernovae and gamma ray bursts While it is understood that binaries play a critical role in the Initial Mass Function the interactions among binary systems significantly affect the dynamical evolution of stellar clusters and galaxies This interdisciplinary volume presents results from state of the art models and observations aimed at studying the impact of binaries on stellar evolution in resolved and unresolved populations Serving as a bridge between observational and theoretical astronomy it is a comprehensive review for researchers and advanced students of astrophysics

Formation and Evolution of Galaxy Bulges (IAU S245) International Astronomical Union. Symposium,2008-09-04 Bulges lie at the heart of most galaxies the building blocks of our universe With a selection of reviews and topical presentations IAU Symposium 245 provides an up to date overview of our knowledge on galaxy bulges and a concise introduction to all current research on the subject The structure dynamics and stellar populations of galaxy bulges both near and far are analysed through state of the art observations The leading models for the formation and evolution of galaxy bulges are described in detail and the constraints observations put on these are dissected Particular emphasis is placed on exploring evidence for both hierarchical merging and secular processes Special attention is also devoted to disentangling the complex web relating galaxy bulges and central supermassive black holes and on the lessons learned from our exquisite knowledge of the bulge of our own Milky Way This volume is the best one stop reference on galaxy bulges currently available
