A leading neuroscientist offers the latest research and many new ideas on the connections between brain circuitry and conscious experience How the mysterious three pound organ in our heads creates the rich array of human mental experience including the sense of self and consciousness is one of the great challenges of 21st century science Veteran neuroscientist W R Klemm presents the latest research findings on this elusive brain mind connection in a lucidly presented accessible and engaging narrative The author focuses on how mind emerges from nerve impulse patterns in the densely packed neural circuits that make up most of the brain suggesting that conscious mind can be viewed as a sort of neural activity based avatar As an entity in its own right mind on the conscious level can have significant independent action shaping the brain that sustains it through its plans goals interests and interactions with the world Thus in a very literal sense we become what we think Against researchers who argue that conscious mind is merely a passive observer and free will an illusion the author presents evidence showing that mental creativity freedom to act and personal responsibility are very real He also delves into the role

of dream sleep in both animals and humans and explains the brain based differences between nonconscious unconscious and conscious minds Written in a jargon free style understandable to the lay reader this is a fascinating synthesis of recent neuroscience and intriguing hypotheses Essays on Mind, Matter Forces, Theology, etc Charles Edward Townsend,1876
