**MOP Connection:** Kinematic Graphing: sublevels 1-4 (and some of sublevels 9-11)

Motion can be described using words, diagrams, numerical information, equations, and graphs. Describing motion with graphs involves representing how a quantity such as the object's position can change with respect to the time. The key to using position-time graphs is knowing that the slope of a position-time graph reveals information about the object's velocity. By detecting the slope, one can infer about an object's velocity. "As the slope goes, so goes the velocity."

#### Review:

1. Categorize the following motions as being either examples of + or - acceleration.
 

a. Moving in the + direction and speeding up (getting faster)	positive
b. Moving in the + direction and slowing down (getting slower)	negative
c. Moving in the - direction and speeding up (getting faster)	negative
d. Moving in the - direction and slowing down (getting slower)	positive

#### Interpreting Position-Graphs

2. On the graphs below, draw two lines/curves to represent the given verbal descriptions; label the lines/curves as A or B.

3. For each type of accelerated motion, construct the appropriate shape of a position-time graph.
