**Ceramic Engineering and Science** V. Frechette, 2012-12-06 The Conference on Emerging Priorities in Ceramic Engineering and Science held at Alfred University November 4-6 1974 was arranged to provide a basis for reassessment of professional goals, procedures and outlook. American priorities among comfort, safety, national prestige, security, convenience and environmental quality are significantly different from those of a dozen years ago. Economic factors have shifted as exemplified by scarcities in energy materials and world food supplies. At the same time, demands for safer products, healthier working conditions and fairer rules of behavior are making themselves felt. Governmental, corporate and consumer interests are all involved and they are intricately interrelated. Higher education for its part must not only respond wisely to changing student attitude itself a part of the national scene but must gain perspective toward the present and toward changes of yet unknown nature which can be expected in the future. Persistent and pointed questions from engineers, managers and students were an indication to us of wide spread concern to understand the new pattern of priorities that is presently emerging. In response to this need, Conference papers were invited from distinguished engineers, scientists and other specialists; their willingness to contribute from their expertise and their thinking is very much appreciated by the editors. The first four chapters of the volume deal with the larger scene and with the viewpoints of those concerned with it in behalf of government corporations and the professions. *The New Materials Society: New materials science and technology*, 1990. Ceramic Fabrication Processes Franklin F. Y. Wang, 2013-10-22 Treatise on Materials Science and Technology Volume 9 Ceramic Fabrication Processes covers the fundamental properties and characterization of materials ranging from simple solids to complex heterophase systems. The book discusses the powder preparation processes, milling, the characterization of ceramic powders and the effects of powder characteristics. The text also describes dry pressing, hot pressing, isostatic pressing, slip casting, doctor blade process, firing and ceramic machining and surface finishing. Surface treatments, mechanical behavior and methods of measuring surface texture are also considered. The book further tackles crystal growth as well as controlled solidification in ceramic eutectic systems. The text also looks into controlled grain growth. Professional scientists and engineers as well as graduate students in materials science and associated fields will find the book invaluable.
