M. Dunn, 2012-12-06 In September 1990 a group of 160 scientists from 19 countries and 21 of the United States met at the  
Red Lion Inn in Rohnert Park Sonoma County California The purpose of this meeting was to share new information from  
recent research on the Aspartic Proteinases This book is a compilation of the information transferred in that forum The  
Aspartic Proteinases include all those enzymes from the fourth class of proteolytic enzymes the first three being the Serine  
Cysteine and Metalloproteinases Of course all the scientists in attendance at the Sonoma Aspartic Proteinase Conference  
would agree that our current level of understanding of the structure and function of the Aspartic Proteinase class of enzymes  
is clearly first class The reasons for this require a bit of historical perspective The group of scientists who are engaged in  
study of this family of enzymes first met as a separate entity in 1976 in Norman Oklahoma at a meeting organized by Jordan  
Tang of the Oklahoma Medical Research Foundation This was an exciting time as the first crystal structures of some of these  
enzymes were described by Blundell James and Davies During that conference the relationship between the two halves of the  
mammalian and fungal enzymes was recognized and this has provided a structural foundation for analysis of the retroviral  
enzymes which came later A book was published by Plenum Press documenting l this conference and the current book is an  
update to that important work      **Subject Guide to Books in Print**, 1983      **Hutchinson's Washington and**

Thompson,2012-12-06 Although debated since the time of Darwin the evolutionary role of mutation is still controversial In over 40 chapters from leading authorities in mutation and evolutionary biology this book takes a new look at both the theoretical and experimental measurement and significance of new mutation Deleterious nearly neutral beneficial and polygenic mutations are considered in their effects on fitness life history traits and the composition of the gene pool Mutation is a phenomenon that draws attention from many different disciplines Thus the extensive reviews of the literature will be valuable both to established researchers and to those just beginning to study this field Through up to date reviews the authors provide an insightful overview of each topic and then share their newest ideas and explore controversial aspects of mutation and the evolutionary process From topics like gonadal mosaicism and mutation clusters to adaptive mutagenesis mutation in cell organelles and the level and distribution of DNA molecular changes the foundation is set for continuing the debate about the role of mutation fitness and adaptability It is a debate that will have profound consequences for our understanding of evolution      **Bowker's Medical Books in Print** ,1974
