Computational Mathematics In China Contemporary Mathematics:

Computational Mathematics in China Zhongci Shi, Chung-Chun Yang, 1994 Describes significant contributions made by Chinese mathematicians over the past decades some of which complement western developments in the field Contributors range from senior mathematicians to young researchers Topics include finite element methods computational fluid mechanics numerical solutions of differential equations computational methods in dynamic systems numerical algebra approximation and optimization Lacks an index Annotation copyright by Book News Inc Portland OR Chinese Journal of Contemporary Mathematics ,2007

Natural Boundary Integral Method and Its Applications De-hao Yu, 2002-09-30 Boundary element methods are very important for solving boundary value problems in PDEs Many boundary value problems of partial differential equations can be reduced into boundary integral equations by the natural boundary reduction In this book the natural boundary integral method suggested and developed by Feng and Yu is introduced systematically It is quite different from popular boundary element methods and has many distinctive advantages The variational principle is conserved after the natural boundary reduction and some useful properties are also preserved faithfully Moreover it can be applied directly and naturally in the coupling method and the domain decomposition method of finite and boundary elements Most of the material in this book has only appeared in the author's previous papers Compared with its Chinese edition Science Press Beijing 1993 many new research results such as the domain decomposition methods based on the natural boundary reduction are added Journal of Computational Mathematics ,1998

Recent Advances in Adaptive Computation Zhongci Shi, 2005 There has been rapid development in the area of adaptive computation over the past decade The International Conference on Recent Advances in Adaptive Computation was held at Zhejiang University Hangzhou China to explore these new directions The conference brought together specialists to discuss modern theories and practical applications of adaptive methods This volume contains articles reflecting the invited talks given by leading mathematicians at the conference It is suitable for graduate students and researchers interested in methods of computation

Synchronization for Wave Equations with Locally Distributed Controls Tatsien Li, Bopeng Rao, 2024-05-28 This book aims to establish a systematic theory on the synchronization for wave equations with locally distributed controls It is structured in two parts Part I is devoted to internal controls while Part II treats the case of mixed internal and boundary controls The authors present necessary mathematical formulations and techniques for analyzing and solving problems in this area They also give numerous examples and applications to illustrate the concepts and demonstrate their practical relevance The book provides an overview of the field and offers an in depth analysis of new results with elegant proofs By reading this book it can be found that due to the use of internal controls more deep going results on synchronization can be obtained which makes the corresponding synchronization theory more precise and complete Graduate students and researchers in control and synchronization for partial differential equations functional analysis find this book useful It is also an excellent reference in the field Thanks to

the explicit criteria given in this book for various notions of controllability and synchronization researchers and practitioners can effectively use the control strategies described in this book and make corresponding decisions regarding system design and operation

Mathematical Analysis of Shock Wave Reflection Shuxing Chen, 2020-09-04 This book is aimed to make careful analysis to various mathematical problems derived from shock reflection by using the theory of partial differential equations The occurrence propagation and reflection of shock waves are important phenomena in fluid dynamics Comparing the plenty of studies of physical experiments and numerical simulations on this subject this book makes main efforts to develop the related theory of mathematical analysis which is rather incomplete so far The book first introduces some basic knowledge on the system of compressible flow and shock waves then presents the concept of shock polar and its properties particularly the properties of the shock polar for potential flow equation which are first systematically presented and proved in this book Mathematical analysis of regular reflection and Mach reflection in steady and unsteady flow are the most essential parts of this book To give challenges in future research some long standing open problems are listed in the end This book is attractive to researchers in the fields of partial differential equations system of conservation laws fluid dynamics and shock theory

Historical Dictionary of Science and Technology in Modern China Lawrence R. Sullivan, Nancy Liu-Sullivan, 2015-03-19 The Historical Dictionary of Science and Technology in Modern China provides the most up to date information on science and technology in China from the late nineteenth century to the present Special attention is given to the historical factors scientists and historical figures behind each scientific development In particular this book pays attention to the scientists who were persecuted to death or tortured during the Cultural Revolution 1966 1976 and whose scientific research was therefore tragically cut short The historical dictionary provides information on science and technology in China from the late nineteenth century to the present including a chronology introduction extensive bibliography over 700 cross referenced dictionary entries on major scientific and technological fields and sub fields entries on western scholars and educators who also impacted scientific achievements in China This book is an excellent access point for students researchers and anyone wanting to know more about the science and technology in China

Recent Advances in Scientific Computing and Partial Differential Equations S.-Y. Cheng, Chi-Wang Shu, Tao Tang, 2003 The volume is from the proceedings of the international conference held in celebration of Stanley Osher's sixtieth birthday It presents recent developments and exciting new directions in scientific computing and partial differential equations for time dependent problems and its interplay with other fields such as image processing computer vision and graphics Over the past decade there have been very rapid developments in the field This volume emphasizes the strong interaction of advanced mathematics with real world applications and algorithms The book is suitable for graduate students and research mathematicians interested in scientific computing and partial differential equations
