Social Networking Mrutyunjaya Panda, Satchidananda Dehuri, Gi-Nam Wang, 2014-07-08 With the proliferation of social media and on line communities in networked world a large gamut of data has been collected and stored in databases The rate at which such data is stored is growing at a phenomenal rate and pushing the classical methods of data analysis to their limits This book presents an integrated framework of recent empirical and theoretical research on social network analysis based on a wide range of techniques from various disciplines like data mining social sciences mathematics statistics physics network science machine learning with visualization techniques and security The book illustrates the potential of multi disciplinary techniques in various real life problems and intends to motivate researchers in social network analysis to design more effective tools by integrating swarm intelligence and data mining

Analysing Users' Interactions with Khan Academy Repositories Sahar Yassine, Seifedine Kadry, Miguel-Ángel Sicilia, 2021-11-15 This book addresses the need to explore user interaction with online learning repositories and the detection of emergent communities of users This is done through investigating and mining the Khan Academy repository a free open access popular online learning repository addressing a wide content scope It includes large numbers of different learning objects such as instructional videos articles and exercises The authors conducted descriptive analysis to investigate the learning repository and its core features such as growth rate popularity and geographical distribution The authors then analyzed this graph and explored the social network structure studied two different community detection algorithms to identify the learning

interactions communities emerged in Khan Academy then compared between their effectiveness They then applied different SNA measures including modularity density clustering coefficients and different centrality measures to assess the users behavior patterns and their presence By applying community detection techniques and social network analysis the authors managed to identify learning communities in Khan Academy s network The size distribution of those communities found to follow the power law distribution which is the case of many real world networks Despite the popularity of online learning repositories and their wide use the structure of the emerged learning communities and their social networks remain largely unexplored This book could be considered initial insights that may help researchers and educators in better understanding online learning repositories the learning process inside those repositories and learner behavior
