Immunotherapies Against Infectious Diseases Saba Tufail, Mohammad Asif Sherwani ,Najmul Islam,2024-11-08 Infectious diseases have jeopardized human health significantly as evidenced by the ongoing Covid 19 pandemic In recent years the world has witnessed outbreaks of many emerging and re emerging infections such as SARS most recent by SARS CoV 2 Ebola Zika MERS dengue which in addition to taking millions of lives have posed major health

issues in recovered individuals. Moreover, several infectious agents like hepatitis B and C viruses, human papillomavirus, human immunodeficiency virus type 1, Epstein Barr virus, human T cell leukemia lymphoma virus type 1, Kaposi sarcoma, associated herpesvirus, *Helicobacter pylori*, and *Streptococcus bovis* have been found to cause different types of cancers since the action mechanism of these agents sometimes transforms an infected cell into a cancer cell. As these infections are difficult to treat with available drugs owing to their lower efficacy, toxicity, and emergence of drug resistance, immunotherapy is viewed as a viable option. Immunotherapy is manipulating the body's defense mechanism to treat and manage disease. Threats of emerging and reemerging infectious diseases, in addition to dangers of developing cancer due to cancer-causing infectious agents combined with lack of effective treatment modalities, has shifted the focus of the scientific community to immunotherapy. Advancements in immunotherapies comprising vaccines, monoclonal antibodies, cytokines, T cells, and checkpoint inhibitors have shown immense promise in combating not only cancer but infectious diseases as well. Through this Research Topic, we aim to discuss recent advances in immunotherapy-based treatment management of infectious diseases. We aim to include studies that evaluate how different forms of immunotherapies, including vaccines, have been exploited for preventing and treating infectious diseases. We welcome Original Research Articles, Reviews, and Mini reviews discussing the following main themes: Vaccines against emerging/re-emerging diseases, Vaccine design components/technologies such as adjuvants, delivery systems, administration route, dosage, Targeted therapy, Cancer immunotherapy using but not limited to monoclonal antibodies, cytokines, T cells, and checkpoint inhibitors, Monoclonal antibodies including nanobodies against SARS-CoV-2 for the treatment and prevention of COVID-19, Immunotherapies for infectious diseases using but not limited to monoclonal antibodies, cytokines, T cells, and checkpoint inhibitors. Authors are encouraged to submit manuscripts elaborating the use of delivery systems, nanoparticles, nanomaterials for the aforementioned theme themes.

Analyzing Social Networks Stephen P. Borgatti, Martin G. Everett, Jeffrey C. Johnson, Filip Agneessens, 2024-02-22. Kickstart your research with this practical bestselling guide to doing social network analysis. Get to grips with the mathematical foundations and learn how to use software tools such as NetDraw and UCINET to reach your research goals. Supporting you step by step through the entire research process from design and data collection to coding, visualisation and analysis, the book also offers Case studies and examples using real data. Exercises drawn from the authors' decades of teaching experience. Online access to datasets, worked examples and a software manual to help you practice your skills. Whether you are new to social network analysis or an experienced researcher, this approachable book is your technical toolbox and research companion all in one.
