Taylor, John D. Jackson, 1999

Asks the student to write all answers in this study guide workbook. This workbook is interactive because it requires students to do things instead of just read more material. All questions are arranged by chapter/modules so students may skip unassigned material. Each module in the study guide refers to the page numbers of the corresponding module in the text. There is a wide variety of questions: multiple choice questions, tables to be filled in, art to be labeled, true/false questions requiring students to write the correct answer if the statement is false, thought provoking conceptual questions, boldfaced terms requiring a written definition, list of objectives to fill in the blank format, and other types of questions      *Principles of Human Anatomy* Gerard J. Tortora, 1995

Designed for introductory courses in human anatomy, this text assumes no previous study of the human body. Instead, this book helps to facilitate a basic understanding of this broad discipline by presenting data, unified concepts, and vocabulary in a manner that is easy for students to understand. Although the focus is on anatomy, links are made between structures and functions to help students understand anatomical concepts. The understanding of structure and function is further enhanced by considering defects and disorders in clinical settings. Organized by systems rather than regions, each chapter of this seventh edition has been revised. This text's coverage of the human anatomy is now complemented by new features including questions with figures, colour anatomy photographs, improved readability, phonetic pronunciations, and more exhibits      Study Guide for Starr and Taggart's Biology, the Unity and Diversity of Life Jane B.
