A Course in Categorical Data Analysis

Thomas Leonard,2020-08-26

Categorical data comprising counts of individuals objects or entities in different categories emerge frequently from many areas of study including medicine sociology geology and education They provide important statistical information that can lead to real life conclusions and the discovery of fresh knowledge Therefore the ability to manipulate understand and interpret categorical data becomes of interest if not essential to professionals and students in a broad range of disciplines Although t tests linear regression and analysis of variance are useful valid methods for analysis of measurement data categorical data requires a different methodology and techniques typically not encountered in introductory statistics courses Developed from long experience in teaching categorical analysis to a multidisciplinary mix of undergraduate and graduate students A Course in Categorical Data Analysis presents the easiest most straightforward ways of extracting real life conclusions from contingency tables The author uses a Fisherian approach to categorical data analysis and incorporates numerous examples and real data sets Although he offers S PLUS routines through the Internet readers do not need full knowledge of a statistical software package In this unique text the author chooses methods and an approach that nurtures intuitive thinking He trains his readers to focus not on finding a model that fits the data but on using different models that may lead to meaningful conclusions The book offers some simple innovative techniques not highlighted in other texts that help make the book accessible to a broad interdisciplinary audience A Course in Categorical Data Analysis enables readers to quickly use its offering of tools for drawing scientific medical or real life conclusions from categorical data sets

Analysis of Categorical Data with R

Christopher R. Bilder,Thomas M. Loughin,2024-07-31

Analysis of Categorical Data with R Second Edition presents a modern account of categorical data analysis using the R software environment It covers recent techniques of model building and assessment for binary multicategory and count response variables and discusses fundamentals such as odds ratio and probability estimation The authors give detailed advice and guidelines on which procedures to use and why to use them The second edition is a substantial update of the first based on the authors experiences of teaching from the book

for nearly a decade. The book is organized as before but with new content throughout and there are two new substantive topics in the advanced topics chapter group testing and splines. The computing has been completely updated with the emmeans package now integrated into the book. The examples have also been updated notably to include new examples based on COVID 19 and there are more than 90 new exercises in the book. The solutions manual and teaching videos have also been updated. Features: Requires no prior experience with R and offers an introduction to the essential features and functions of R. Includes numerous examples from medicine, psychology, sports, ecology and many other areas. Integrates extensive R code and output. Graphically demonstrates many of the features and properties of various analysis methods. Offers a substantial number of exercises in all chapters enabling use as a course text or for self study. Supplemented by a website with data sets, code and teaching videos. **Analysis of Categorical Data with R, Second Edition** is primarily designed for a course on categorical data analysis taught at the advanced undergraduate or graduate level. Such a course could be taught in a statistics or biostatistics department or within mathematics, psychology, social science, ecology or another quantitative discipline. It could also be used by a self learner and would make an ideal reference for a researcher from any discipline where categorical data arise.

Practitioners of statistics in government, industry, particularly pharmaceutical and academia, will want this new edition.

The Analysis of Cross-Classified Categorical Data

Stephen E. Fienberg, 2007-07-30. Until recent years the statistical and computational techniques available for the analysis of cross classified data were quite limited. This book presents some of the recent work on the statistical analysis of cross classified data using loglinear models.

Categorical Data Analysis by Example Graham J. G. Upton, 2016-10-24

Introduces the key concepts in the analysis of categorical data with illustrative examples and accompanying R code. This book is aimed at all those who wish to discover how to analyze categorical data without getting immersed in complicated mathematics and without needing to wade through a large amount of prose. It is aimed at researchers with their own data ready to be analyzed and at students who would like an approachable alternative view of the subject. Each new topic in categorical data analysis is illustrated with an example that readers can apply to their own sets of data. In many cases R code

is given and excerpts from the resulting output are presented In the context of log linear models for cross tabulations two specialties of the house have been included the use of cobweb diagrams to get visual information concerning significant interactions and a procedure for detecting outlier category combinations The R code used for these is available and may be freely adapted In addition this book Uses an example to illustrate each new topic in categorical data Provides a clear explanation of an important subject Is understandable to most readers with minimal statistical and mathematical backgrounds Contains examples that are accompanied by R code and resulting output Includes starred sections that provide more background details for interested readers Categorical Data Analysis by Example is a reference for students in statistics and researchers in other disciplines especially the social sciences who use categorical data This book is also a reference for practitioners in market research medicine and other fields

All chapters end with a section providing references to books or articles for the inquiring reader. C M O'Brien, Short Book Reviews Vol 23 3 2003

The Statistical Analysis of Categorical Data

Erling B. Andersen, 2012-12-06. The aim of this book is to give an up to date account of the most commonly used statistical models for categorical data. The emphasis is on the connection between theory and applications to real data sets. The book only covers models for categorical data. Various models for mixed continuous and categorical data are thus excluded. The book is written as a textbook although many methods and results are quite recent. This should imply that the book can be used for a graduate course in categorical data analysis. With this aim in mind chapters 3 to 12 are concluded with a set of exercises. In many cases the data sets are those data sets which were not included in the examples of the book although they at one point in time were regarded as potential candidates for an example. A certain amount of general knowledge of statistical theory is necessary to fully benefit from the book. A summary of the basic statistical concepts deemed necessary pre requisites is given in chapter 2. The mathematical level is only moderately high but the account in chapter 3 of basic properties of exponential families and the parametric multinomial distribution is made as mathematical precise as possible without going into mathematical details and leaving out most proofs.

Each chapter demonstrates how to conduct the analysis using R, how to interpret the models, and how to present the results for publication. A companion website for this book contains datasets and R commands used in the book for students and solutions for the end of chapter exercises on the instructor site.
