

# Building reinforced, diaphragm and wide plan freestanding walls

This Guide, for builders, designers and planners, presents rule of thumb guidance for stable construction of a range of common brick or blockwork wall types. Separate values for wall height and foundation width are given for increasing levels of exposure across the UK and solutions can be compared with complementary advice published for simple plan unreinforced walls (Good Building Guide 14).

The Guide includes notes on materials selection and good construction practice. The need for good supervision is stressed, particularly with reinforced walls, where a number of quite different building operations are involved which require careful co-ordination and execution.

The advice in this guide allows walls to be built up to a height of 2.5 m. Before starting you should check local planning restrictions, which may limit walls to a maximum height of 2 m or less.

Guide to Good Practice in the Management of Time in Major Projects CIOB (The Chartered Institute of Building),2018-04-30 A practical treatise on

the processes and standards required for the effective time management of major construction projects. This book uses logical step by step procedures and examples from inception and risk appraisal through design and construction to testing and commissioning to show how an effective and dynamic time model can be used to manage the risk of delay in the completion of construction projects. Integrating with the CIOB major projects contract the new edition places increased emphasis on the dynamic time model as the way to manage time and cost in major projects as opposed to the use of a static target baseline program. It includes a new chapter distinguishing the principal features of the dynamic time model and its development throughout the life of a project from inception to completion. Guide to Good Practice in the Management of Time in Major Projects Dynamic Time Modelling 2nd Edition features new appendices covering matters such as complexity in construction and engineering projects productivity guides including specific references to the UK Australia and the USA and a number of case studies dealing with strategic time management and high density resource based scheduling. Provides guidance for the strategic management of time in construction and civil engineering projects. Demonstrates how to use a dynamic time model to manage time proactively in building and civil engineering projects. Sets out processes and standards to be achieved ensuring systematic documentation and quality control of time management. Integrates with the CIOB major projects contract Guide to Good Practice in the Management of Time in Major Projects Dynamic Time Modelling 2nd Edition is an ideal handbook for project and program management professionals working on civil engineering and construction projects including those from contractors clients and project management consultants.
